Product Catalog > Selecting a Pressure Gauge

Selecting a Pressure Gauge

CONNEXION

When selecting a pressure gauge, it is important to consider the following factors to ensure safety and accuracy:

- 1. Pressure fluid composition
- 2. Pressure fluid temperature
- 3. Ambient conditions
- 4. Pressure range
- 5. Conditions affecting wear of the system
- 6. Method of mounting
- 7. Required accuracy

1. Pressure fluid composition

Since the sensing element of a pressure gauge may be exposed directly to the measured medium, consider the characteristics of this medium. It may be corrosive, it may solidify at various temperatures, or it may contain solids that will leave deposits inside the sensing element. For pressure fluids that will not solidify under normal conditions or leave deposits, a Bourdon tube gauge is acceptable. Otherwise a Sealgauge[®] or diaphragm seal should be used. A chemical compatibility chart follows this section to aid in the selection of the proper sensing element material.

2. Pressure fluid temperature

Steam and other hot media may raise the temperature of the gauge components above safe working limits of the sealed joints. In these cases it is recommended that a siphon, cooling tower or diaphragm seal be used in conjunction with the pressure gauge.

3. Ambient conditions

The normal ambient temperature range for WIKA pressure gauges is -40° F to $+140^{\circ}$ F (-40° C to $+60^{\circ}$ C) for dry or silicone-filled gauges and -4° F to $+140^{\circ}$ F (-20° C to $+60^{\circ}$ C) for glycerine-filled gauges. The error caused by temperature changes is +0.3% or -0.3% per 18°F rise or fall, respectively. The reference temperature is 70°F (20° C). The correction is for the temperature of the gauge, and not the temperature of the measured medium. Remote gauge mounting using a diaphragm seal and capillary line is one alternative for applications involving extreme ambient temperature.

Moisture and weather effects must also be considered. Liquid-filled gauges prevent condensation build up. For outdoor use, stainless steel, brass, or plastic cased gauges are recommended.

4. Pressure range

A gauge range of twice the working pressure is generally selected. The working pressure in all cases should be limited to 75% of the gauge range. Where alternating pressure and pulsation are encountered, working pressure should be limited to 2/3 of the gauge range.

5. Conditions affecting wear of the system

In applications involving severe pressure fluctuation or pulsation, the use of restrictors and/or snubbers is recommended. In addition, liquid-filled gauges increase the service life of gauges in these conditions. WIKA liquidfilled gauges are generally filled with glycerine. Silicone for larger temperature extremes and Halocarbon[®] for use with oxidizing agents such as chlorine, oxygen, and hydrogen peroxide are also available.

6. Method of mounting

Radial (LM) and back (CBM or LBM) connections are available for most WIKA gauges. WIKA stocks gauges with standard NPT threaded connections. Other types such as metric threads, straight threads, hose barbs, and special fittings are available as a special order.

Pressure gauges should be mounted in the upright position. For applications where the gauge is mounted side ways, horizontally, or upside down, contact WIKA Customer Service for gauge type compatibility.

7. Required accuracy

WIKA stocks gauges with accuracies from $\pm 3/2/3\%$ to $\pm 0.1\%$ of span (ASME Grade B to Grade 4A).

To ensure safe and accurate gauge selection, you must take all of the above factors into consideration. When in doubt, please do not hesitate to contact your local stocking distributor or WIKA Customer Service for assistance!

Find the process fluid in the table above and match the letter code (A,B,C, or D) with the wetted part material listed below:

Product Catalog > Advantages of Liquid-Filled Gauges

Advantages of Liquid-Filled Gauges

Liquid-filled gauges

Liquid-filled pressure gauges provide a number of advantages:

- * the liquid absorbs vibration and pressure spikes
- * the dampening action of the liquid enables the operator to take readings during conditions of rapid dynamic loading and vibration
- * the liquid lubricates all moving elements, dramatically reducing wear in the movement
- * because most liquid-filled gauges are filled with non-aqueous liquid and hermetically sealed, they perform in corrosive environments and are immune to moisture penetration and icing, and shock effects are lessened

Liquid-filled gauges enhance the reliability and integrity of the measuring system for long periods under extreme operating conditions.

Indicates liquid-fillable pressure gauge.

Liquid Fill Fluid

Ambient Temperature Ratings (Table A)

Allowable Operating Range - Temperature range in which the operation of the gauge is not adversely affected by the filling liquid. At temperatures above the maximum rating, the fluid may break down. At temperatures below the minimum rating, the fluid may solidify (freeze).

NOTE: Some parts of the pressure gauge may not be able to withstand temperatures above 140°F. Consult with the factory for technical assistance for these applications.

Choose the Right Liquid

The type of liquid used to fill the gauge varies with the application. Although pure glycerine provides the best performance in most applications, each has its own requirements. Guidelines to help ensure that a fluid is properly matched to an application are:

- if icing is a problem, use gauges filled with silicone oil or other comparable liquids. They have low viscosities even at -60°C
- * if the system has electric accessories, such as contacts, use insulating oils, and
- * if extreme temperature fluctuations are expected, use silicone oils

The higher the liquid viscosity, the greater its dampening capacity. The reason for this is that dampening changes in proportion to the temperature-dependent viscosity of the filling liquid. The suitable degree of dampening depends on the operating requirements the gauge must meet, such as pointer response time, pressure extremes, vibration, and changes in pressure. WIKA can recommend specific liquids to suit problem applications.

Fill Fluid	Allowable Operating Range
Glycerine Dow 99.7% USP, Synthetic 1118 Centistokes at 68°F	-4°F to 140°F -20°C to 60°C
Silicone Dow Corning 200 Fluid 1000 Centistokes at 77°F	-40°F to 140°F -40°C to 60°C
Halocarbon® Halocarbon® Products 6.3 Centistokes at 100°F	-40°F to 140°F -40°C to 60°C

Table A - Allowable Ambient Temperature Ratings

Liquid-Filled Gauge Case Venting

For pressure gauges with full scale ranges of 300 psi and below (including vacuum and compound ranges of 30" Hg-0-200 psi and below), case venting (after the gauge is installed) is necesary to preserve the accuracy. Temperature fluctuations during shipment and in the process application cause the liquid filling to expand and contract which in turn increases or decreases case pressure. As a result, accuracy can be decreased and the pointer may not return to zero properly until the gauge is vented to the atmosphere.

To vent a WIKA gauge, move the valve to the open position which will release any pressure or vacuum built up in the case. If the gauge is installed in an upright position, the lever can be left in the open position. The lever allows the use of a gauge in a non-upright orientation.

Product Catalog > WIKA Type Numbers

Ordering Guidelines for Pressure Gauges

1) "Quick Order" 7- or 8-Digit Part Numbers:

Example: 9834850

Use the part number for the instrument you wish to order.

If you need additional options, or don't see a part number referenced for the exact product you need, you may use "DESCRIPTIVE TEXT" as indicated below (see #2). **A 7-or 8-digit part number will be provided with your Order Confirmation.** The part number provided may then be used for re-ordering purposes.

2) Descriptive Text Part Number System:

Example:

Standard Product Description Section					Additional Options & Accessories
232.34	4.5	100 psi	1⁄2"	LM	SG, PM
(Typel #)	(Dial Size)	(Pressure Range)	(Process Conn. &	Location)	(Additional Options / Accessories)

The above example would indicate a 4½" process gauge, dry, 100 psi dial scale, ½" NPT connection, lower mount connection with the following selected options: safety glass (SG) and panel mount (PM), as indicated.

- Descriptive text can be used anytime you do not find an exact item with a listed part number. You may add as many codes at the end of the descriptive text as is required to configure the product.
- CODES and installed prices are found on a selection chart for each Model Type. Additional options may be located on the Accessory pages section in the back of the Catalog 900.
- Please reference the WIKA Type Number (pg. 5) for additional Model/Type information. WIKA Model Types may already determine many configurations for wetted parts and case fill.
- Options and Accessories should always appear at the end of the Descriptive Text, separated by commas. If you are not sure what to use for abbreviated code, then simply SPELL IT OUT.

NOTE: If you provide a part number and descriptive text, we will use the part number only.

If you are unclear, do not see the option(s) needed, or require ordering assistance, please contact a WIKA Customer Care or Technical Quote Team Representative.

Mechanical Pressure > Commercial Gauges > 111.10

Туре 111.10

WIKA Type 111.10 standard pressure gauges are designed for long and reliable service under rugged conditions. Some typical applications are for pumps, hydraulic and pneumatic systems, compressors, as a contractor's gauge, and for many other applications where the measured media does not corrode brass.

Туре 111.11

WIKA Type 111.11 gauges are designed for use with compressed gases, such as those used in the welding industry. The low copper content of the Bourdon tube for pressure ranges 800 psi and below makes it safe for use with acetylene. All Type 111.11 gauges are cleaned to ASME B40.100 Level IV. "USE NO OIL" is printed in red on the face of each dial, making them safe for use with oxygen.

Туре 113.13

The WIKA Type 113.13 gauge is the ideal choice for OEM and general industrial applications requiring an economical, liquid-filled pressure gauge. The glycerine liquid fill dampens the Bourdon tube and reduces wear of the movement, extending gauge life. Typical applications of the Type 113.13 include air compressors, hydraulic presses, pumps, marine engines, as well as other types of industrial hydraulic and pneumatic equipment.

Standard Features

Size:	1½" & 2½"	Accuracy:	± 3/2/3% of span

INDUSTRIAL GAUGES

Mechanical Pressure > Industrial Gauges > 131.11

Type 131.11

Type 131.11 gauges feature 316 stainless steel wetted parts, a 304 stainless steel case, and a snap-in, acrylic window. When installation space is limited and stainless steel wetted parts are needed, WIKA Type 131.11 is the best choice. The stainless steel construction also makes these gauges ideal for harsh environments.

Standard Features

Available Options

- Lower back mount connection
- Safety glass window
- Adjustable pointer
- Drag pointer (maximum reading indicator)
- Cleaned for oxygen service
- Magnetic or Inductive contact switches
- Special connections

Applications

- Sturdy industrial pressure gauges designed in compliance with operational safety requirements of EN 837-1 and ASME B40.100
- Reliable pressure gauge for machine and plant construction industry
- Suitable for gaseous or liquid media that will not obstruct the pressure system or corrode copper alloy wetted parts

Abbreviations

LM - Lower mount SS - Stainless steel

INDUSTRIAL GAUGES

Mechanical Pressure > Industrial Gauges > 213.40

WIKA

Type 213.40

20

10

This Type 213.40 gauges feature an integral Bourdon tube which is soldered or brazed directly into the one-piece case/socket.

Applications

- Intended for adverse service conditions where pulsation or vibration exists
- Suitable for gaseous or liquid media that will not obstruct the pressure
- Hydraulics and compressors

Standard Features

otaridarare				
Size: Case: Ring:	21/2" & 4" Forged brass, gold-painted (21/2") Gold-plated ABS (4") Chome-plated brass	Pointer: Accuracy:	Black aluminum $(2\frac{1}{2}") \pm 2\frac{1}{2\%}$ of span ASME B40.100 Grade A $(4) \pm 1\%$ of span	
Wetted Parts: Window: Dial:	Copper alloy Acrylic White aluminum		ASME B40.100 Grade 1A Lower or back mount Glycerine

Type 21X.40PM

WIKA Type 21X.40PM gauges are designed to fit existing paper machine panels. Each gauge is hermetically sealed to prevent moisture from entering during washdown. The hermetic seal makes this gauge liquid fillable for high vibration or pulsation applications. The generously oversized polished stainless steel front flange allows for easy retrofit installation.

Type 212.40PM- Dry case Type 213.40PM - Liquid filled case

Standard Features

Size:	31⁄2"	Pointer:	Black aluminum
Case:	Forged brass, gold-painted	Accuracy:	± 2/1/2% of span
Ring:	Polished SS front flange		ASME B40.100 Grade A
Wetted Parts:	Copper alloy	Connection:	Back mount
Window:	Acrylic		
Dial:	White aluminum

INDUSTRIAL GAUGES

Mechanical Pressure > Industrial Gauges > 21X.53

Type 21X.53

20

WIKA Type 21X.53 gauges feature a stainless steel case for protection in harsh environments. The O-ring seal around the connection makes this gauge field liquid fillable. When filled, the 213.53 is excellent for high vibration and pulsation applications.

Standard Features

Size:	2", 21⁄2", 4"	Pointer:	Black aluminum
Case:	304 SS	Accuracy:	(2" & 2½") ± 2/1/2% of spa
Wetted Parts:	Copper alloy		ASME B40.100 Grade A
Window:	Polycarbonate		(4") ±1.0% of span (4" size
Dial:	White aluminum		ASME B40.100 Grade1A
Ring:	SS polished	Connection:	Lower or back mount

INDUSTRIAL GAUGES

Mechanical Pressure > Industrial Gauges > 23X.53

Type 23X.53

The rugged construction of WIKA Type 23X.53 stainless steel gauges provides resistance to the most corrosive media and environments. These gauges feature 316 stainless steel wetted parts and 304 stainless steel case and crimped ring, and can be liquid filled in the field.

Standard Features

Size:	2", 21/2", 4"	Accuracy:	(2" & 21/2") ± 2/1/2% of span
Case:	304 SS		ASME B40.100 Grade A
Wetted Parts:	316L SS		(4") ±1.0% of span (4" size)
Window:	Polycarbonate		ASME B40.100 Grade1A
Dial:	White aluminum	Connection:	Lower or back mount
Ring:	SS polished		
Pointer:	Black aluminum		

Type 232.53 - Dry case Type 233.53 - Liquid filled case

Available Options

- Dampened movement
- Drag pointer (max. reading indicator)
- Cleaned for oxygen service
- Special connection

Applications

- With liquid filled case for applications with high dynamic pressure pulsations or vibration
- Suitable for corrosive environments and gaseous or liquid media that will not obstruct the pressure system
- Process industry: chemical/petrochemical, power stations, mining, on and off shore, environmental technology, mechanical engineering and plant construction

INDUSTRIAL GAUGES

Mechanical Pressure > Industrial Gauges > 21X.54

Type 21X.54

20

Available in ranges up to 10,000 psi, WIKA Type 21X.54 pressure gauges offer heavy-duty service in industrial applications and environments. They feature a stainless steel case and the industrial grade Swiss movement assures repeatable accuracy and long service life.

Standard Features

Size:	4"	Ring:	SS polished
Case:	304 SS	Pointer:	Black aluminum - adjustable
Wetted Parts:	Copper alloy	Accuracy:	±1.0% of span (4" size)
Window:	Safety glass		ASME B40.100 Grade1A
Dial:	White aluminum	Connection:	Lower or back mount

For full specifications and dimensional drawings, visit www.wika.com to download datasheet 21X.54.

Type 233.55

The Type 233.55 LBM is specifically designed and manufactured to exact panel builder requirements. With exclusive features, it is ideal when used for panel mount gauges in the oil and gas, refinery, petrochemical, and food and beverage industries.

Standard Features

Size:	21⁄2"	Pointer:	Black aluminum
Case:	304 SS	Accuracy:	<u>+</u> 2/1/2% of span
Wetted Parts:	316L SS		ASME B40.100 Grade A
Window:	Safety glass	Connection:	Lower back mount
Dial:	White aluminum	Liquid fill:	Glycerine
Ring:	SS polished	Restrictor:	Standard

Type 23X.30

20

WIKA Type 23X.30 stainless steel gauges have a solid-front/blow-out back safety case. This gauge is an ideal choice for process, chemical, petrochemical, oil exploration and production, power generation applications, and any other application which demands reliable pressure measurement instrumentation.

Type 232.30 - Dry case Type 233.30 - Liquid filled case (LM only)

Standard Features

Size:	21/2" & 4"	Pointer:	Black aluminum, adjustable
Case:	304 stainless steel	Accuracy:	(2½") ± 2/1/2% of span
Ring:	Polished stainless steel		ASME B40.100 Grade A
Wetted Parts:	316L stainless steel		(4") ±1.0% of span (4" size)
Window:	(21/2") Polycarbonate		ASME B40.100 Grade1A
	(4") Safety glass	Connection:	Lower and back mount
Dial:	White aluminum

PROCESS GAUGES

Mechanical Pressure > Process Gauges > 232.34DD

Type 232.34DD

WIKA Type 232.34DD Direct Drive Process Gauges feature a direct drive, movementless pressure system. With a shock absorbing Bourdon tube design, these gauges are an effective means for guarding against severe shock and vibration applications. The 232.34DD is manufactured in a standard yellow 4½" process gauge style case (additional colors available) and comes standard completely equipped with an external zero adjustment and a high 0.5% full scale accuracy.

Standard Features

Size:	41⁄2"	Pointer:	Black aluminum,
Case:	Yellow Pocan®		non-adjustable
Ring:	Threaded yellow Pocan®	Accuracy:	±0.5% of span
Wetted Parts:	X-750 Inconel / 316L SS		ASME B40.100 Grade 2A

PROCESS GAUGES

Mechanical Pressure > Process Gauges > 232.25

Type 232.25

WIKA Type 232.25 gauges have a glass covered hinged ring front with securing screws as standard. The adjustable pointer is easily accessed under the hinged ring front. Designed for panel mounting, the Type 232.25 gauge features 316 SS wetted parts and a one-piece aluminum solid-front safety case design. Well-suited for installations in process panel and control applications, Type 232.25 gauges meet ASME Grade 2A accuracy standards.

Standard Features

Size:	41⁄2" & 6"
Case:	Black-painted aluminum
Ring:	Black-painted aluminum
Wetted Parts:	316L stainless steel
Window:	Flat instrument glass
Dial:	White aluminum

Pointer: Accuracy: Connection:

Black aluminum, adjustable ±0.5% of span ASME B40.100 Grade 2A Lower back mount

For full specifications and dimensional drawings, visit www.wika.com to download datasheet 232.25.

Available Options

- Dampened movement
- Safety glass window
- Cleaned for oxygen service
- Special connections
- Instrument glass window

Applications

- Pressure monitoring panels
- Suitable for corrosive gaseous or liquid media that will not clog the pressure system or attack 316L SS parts
- Process industry: chemical/petrochemical, power stations, mining, on and offshore, environmental technology, mechanical engineering and plant construction

Abbreviations LBM - Lower back mount SS - Stainless steel

Mechanical Pressure > Industrial Gauges > 4XX.12

Type 4XX.12

WIKA Type 422.12 and 432.12 Sealgauges[®] offer superior protection from viscous and crystallizing media. Type 422.12 features carbon steel wetted parts, while Type 432.12 offers the corrosion protection of 316 stainless steel wetted parts. Each model is supplied with a standard black cast iron case and standard ½" NPT female connection.

Standard Features

Size:	4" & 6"
Case:	Black-painted cast iron
Ring:	Black-painted SS
Wetted Parts:	(41x.12) carbon steel,
	SS & Buna-N
	(43x.12) SS & Buna-N

Window: Dial: Pointer: Accuracy: Connection:

Flat instrument glass White aluminum Black aluminum, adjustable ±1.5% of span Lower mount

Overpressure Safety:

- ranges \leq 6 psi: 5 x full scale value

- ranges > 6 psi: 3 x full scale value, max 600 psi protection

For full specifications and dimensional drawings, visit www.wika.com to download datasheet 4XX.12.

Mechanical Pressure > Low Pressure Gauges > 611.10

Туре 611.10

WIKA Type 6X1.10 low pressure gauges are extremely sensitive and highly accurate. The capsule element pressure system is designed to measure pressure and vacuum of gaseous media from as low as 10" H_2O to 275" H_2O (10 psi). The finely polished nickel-silver pinion gear and shaft of the movement ensure repeatable accuracy.

Standard Features

Mechanical Pressure > Low Pressure Gauges > 632.50

Туре 632.50

WIKA Type 632.50 low pressure gauges offer the corrosion resistance of 316 stainless steel wetted parts and is able to measure pressure and vacuum of gaseous media from as low as 1" H_2O to 275" H_2O (10 psi). The finely polished nickel-silver pinion gear and shaft of the movement ensure repeatable accuracy.

Standard Features

4"
304 stainless steel
316L stainless steel
Safety glass
White aluminum

Pointer: Accuracy: Connection:

Black aluminum ±2/1/2% of span ASME B40.100 Grade B : Lower mount

Mechanical Pressure > Differential Pressure Gauges > 700.04

Type 700.04

This piston-style differential pressure gauge is designed for use with clean liquid or gaseous media where high differential pressure/static process pressures are required. Type 700.04 is suitable for measuring pressure drops across a variety of devices, including filters, strainers, separators, and heat exchangers.

Standard Features

Size:	21/2" & 41/2"
Case:	Black thermoplastic
Wetted Parts:	Ceramic magnet,
	316SS spring, Viton O-rings,
	sensor housing (see table)

Window:	Acrylic
Dial:	White aluminum
Pointer:	Black aluminum
Accuracy:	$\pm 2\%$ of span
	(ascending pressure only)
Connection:	Back mount

6000 psig Max. Safe Working Pressure

20

WIKA Type 332.54 inspector's test gauges are convenient for field calibrations. They have an accuracy of $\pm 0.25\%$ which meets ASME B40.100 Grade 3A. The mirrored band on the dial and the knife-edge pointer make it easy to take accurate readings from the gauge. Type 332.54 test gauges are supplied standard with a padded, nylon carrying pouch.

Standard Features

Size:	4"	Pointer:	Black aluminum, adjustable knife-edge
Case:	304 stainless steel	Movement:	Stainless steel
Ring:	Polished SS	Accuracy:	$\pm 0.25\%$ of span (ASME B40.1 Grade 3A)
Wetted Parts:	316L stainless steel		0/30" Hg to 600 psi and 2000 psi to
Window:	Safety glass		20,000 psi ±0.5% of span (ASME B40.1
Dial:	White aluminum,		Grade 2A) 600>2000 psi
	with mirrored band	Connection:	Lower mount

For full specifications and dimensional drawings, visit www.wika.com to download datasheet 332.54.

Mechanical Pressure > Test Gauges > 332.34DD

Type 332.34DD

20

WIKA Type 332.34DD Direct Drive Test Gauge features a direct drive, movementless pressure system. With a shock absorbing Bourdon tube design, these gauges are an effective means for guarding against severe shock and vibration applications that require test gauge accuracy. The 332.34DD is manufactured in a standard red 4½" process gauge style case (additional colors available) and comes standard completely equipped with an external zero adjustment and a high 0.25% full scale accuracy.

Standard Features

Mechanical Pressure > High Precision Gauges > 332.25

Type 332.25 / 312.25

WIKA Type 332.25 test gauges have a glass covered hinged ring front with securing screws as standard. The adjustable knife edge pointer is easily accessed under the hinged ring front. Designed for panel mounting, the Type 332.25 gauge features 316 stainless steel wetted parts and a one-piece aluminum solid-front safety case design. Well-suited for installations in process panel and control applications, Type 332.25 gauges meet ASME Grade 3A accuracy standards.

Mechanical Pressure > High Precision Gauges > 342.11

Type 342.11

WIKA Type 342.11 precision test gauges are high guality, time-proven instruments designed for use as pressure transfer standards and in applications requiring exceptional precision and high reliability in the measurement of pressure. Both types of WIKA precision test gauges feature a Bourdon tube made of Ni-Span C® for all pressure ranges above 0-10 psi. Ni-Span C® has exceptional temperature stability and eliminates the need for an expensive thermal compensator.

Diaphragm Seals > Diaphragm Seals

Diaphragm Seals

Diaphragm seals, also referred to as chemical seals, are used to isolate pressure gauges, switches, and transmitters from clogging and/or corrosive media. Standard diaphragm seal bodies and diaphragms are made of stainless steel; however, a variety of materials from carbon steel to Hastelloy[®] C-276 are available to meet the demands of most applications. WIKA diaphragm seals can operate in pressure applications from 10" H_2O to 20,000 psi and media temperature between -130°F and 752°F.

EXAMPLES OF TYPICAL DIAPHRAGM SEAL APPLICATIONS

- The media is corrosive and may damage a sensitive element such as a Bourdon tube gauge, pressure switch or transmitter diaphragm.
- The temperature of the media may be too high for a standard gauge, switch or transmitter to operate properly.
- The media is highly viscous or tends to crystallize, or polymerize and may clog the pressure port of a gauge, switch or transmitter.
- The media is non-homogenous or contains suspended matter such as wood pulp which may clog the pressure port of a gauge, switch or transmitter.
- Remote reading is required. A diaphragm seal with a capillary line will allow remote installation of a pressure instrument.
- The **sanitary cleanliness level** is critical. A flush mounted or INLINE SEAL[™] sanitary type diaphragm seal avoids dead space and cavities.
- The media is toxic or hazardous and may pollute the environment. A suitably designed diaphragm seal will provide additional protection.
- The application requires high overpressure protection. A diaphragm seal with a contoured diaphragm bed can be configured to provide overpressure protection and protection to the instrument.

WIKA diaphragm seal systems are an excellent value and offer savings by:

Meeting fugitive emission requirements

Extending the service life of the pressure instrument

Reducing the cost of installation

Reducing or eliminating maintenance costs

Diaphragm Seals > Operating Principle

Operating Principle

The drawing below illustrates the operating principle of a diaphragm seal assembly. A pressure measurement instrument such as a conventional pressure gauge or electronic pressure transmitter is either mounted directly to the diaphragm seal or attached to the seal by means of a capillary or cooling element.

A diaphragm within the diaphragm seal separates the gauge/transmitter from the process medium. Any part of the diaphragm seal (i.e., diaphragm, lower housing, gaskets) which will be exposed to the process medium is selected from materials resistant to pressure, temperature and possible chemical attack by the process medium.

The diaphragm seal is also filled with a transmitting fluid or **system fill fluid**. Any pressure applied by the process medium to the seal diaphragm is hydraulically transmitted to the pressure element of the gauge/switch/transmitter thus generating a pressure reading.

For additional information, please call 1-888-945-2872 or visit www.wika.com.

Diaphragm Seals > Selection Guidelines

Selection Guidelines

When selecting a diaphragm seal assembly, the following details must be taken into consideration to ensure a safe and satisfactory operation. For specific technical assistance regarding temperature effects, volumetric compatibility, etc., contact the WIKA customer service department or send a completed diaphragm seal specification sheet to the factory for analysis.

- 1. Process composition
- 2. Temperature
- 3. Pressure range
- 4. Pressure instrument
- 5. Process connection

- 6. System fill fluid
- 7. Mounting position
- 8. Response time
- 9. Seal and gauge matches

1. Process composition

Since the diaphragm and lower housing of the diaphragm seal will be exposed to the process medium, it is critical to select materials for these components which will be compatible with this medium. Tables are available to assist in the selection of these materials (see Pressure Gauge Section); however, the customer is the ultimate source for specifying suitable materials. WIKA cannot guarantee suitability. For information, see numerous reference guides such as corrosion table reference books. If the pressure fluid is very thick, solidifies, or is full of solids, this should also be taken into consideration.

2. Temperature

Each diaphragm seal measurement system (diaphragm seal, pressure instrument, and cooling element or capillary, if applicable) is filled with an amount of fill fluid at an ambient temperature of about 70°F. This temperature is referred to as the system fill temperature. The fill fluid will expand or contract according to temperature changes. This in turn causes the pressure in the sensing element to rise or fall, thus adding zero shifting effects to the instrument output. To reduce this effect, the temperatures of the process and the environment should be specified when selecting a diaphragm seal system (see Diaphragm Seal Specification Sheet). Special advanced calibration techniques can be used to ensure the best possible accuracy. At temperatures above 300°F, a cooling element or capillary is suggested to protect the pressure instrument.

3. Pressure range

The displacement volume on the diaphragm seal required to "drive" each diaphragm seal measurement system (diaphragm seal, pressure instrument and capillary, if applicable) must be greater than the displacement volume needed to move the pressure sensing element. Normally, the lower the pressure range, the larger the diaphragm is required to "drive" the system. Conversely, for higher pressure ranges, smaller diaphragms are sufficient. Pressure transmitters also follow the general rule of the lower the pressure, the larger the diaphragm required.

4. Pressure instrument

As mentioned above (Item 3 - Pressure range), the diaphragm seal must supply sufficient displacement volume to enable the pressure instrument to reach full scale. As a general rule, smaller size gauges are better suited to low pressure applications since less displacement volume is required on the part of the diaphragm seal to drive the pressure instrument.

5. Process connection

The process connection is specified by the customer. Most process connections are threaded, flanged, or clamped; however, additional connections are available. Teflon[®] coating and lining is only available in flanged connections, since tapered NPT threads strip off the Teflon[®] during installation. However, solid Teflon[®] threaded connections are available with NPT threads.

6. System fill fluid

WIKA offers a wide range of system filling fluids allowing temperatures from -130°F to 752°F. Chemical compatibility of the system fill fluid with the process fluid must be carefully considered in the event of a leak. In food processing applications a nontoxic fluid should be selected. Special fill fluids are also available for oxidizing media such as oxygen and chlorine.

Diaphragm Seals > Selection Guidelines

Selection Guidelines (continued)

7. Mounting position

Mounting position is important for diaphragm seal systems which include a capillary. The level difference between the diaphragm seal and the pressure instrument causes a hydrostatic pressure to act on the sensing element:

- a. For gauges mounted above the level of the diaphragm seal, the pointer on the dial of the gauge will be lower than the zero point.
- b. For gauges mounted below the level of the diaphragm seal, the pointer on the dial of the gauge will be higher than the zero point.

The diaphragm seal system can be calibrated to compensate for the effect caused by the hydrostatic pressure, if the level difference is known in advance (see Diaphragm Seal Specification Sheet for assistance).

8. Response time

Response time, i.e., the time it takes the pressure instrument to indicate 90% of the value of a sudden pressure variation, is especially important for instrument/diaphragm seal assemblies which include a capillary. Response time increases significantly in systems with long capillaries. In applications requiring long capillaries, response times can be reduced by using larger diameter capillary tubing and reducing the viscosity of the system fill fluid. Be advised that increasing the inner diameter of the capillary increases the temperature influence of the measuring system. Consult factory if detailed information is needed.

9. Seal and gauge matches

For low ranges, gauge preference is 2XX.54 or 2XX.34 for access to perform calibration adjustments. Gauges with crimp rings might not be usable due to potential recalibration. The table below shows the common matches between gauge and diaphragm seal types **recommended by the factory**. Please contact the Diaphragm Seal Department for more information.

Table 4 - Seal and	Table 4 - Seal and Gauge Combinations

Diaphragm Seals > Assembled Seals > M93X.25

Type M93X.25

Type M93X.25 sanitary gauge provides a ¾" Tri-Clamp® process connection with a 21/2" stainless steel gauge. This assembly contains an electropolished process connection and meets the criteria set by "3A". The gauge is ideal for applications in the food and beverage, pharmaceutical and biotechnology industries.

ASSEMBLED SEALS

Diaphragm Seals > Assembled Seals > M93X.3A

Туре М93Х.ЗА

Standard Features

Design: All-welded construction in full compliance with '3A' third party standards and meets the most rigorous biopharmaceutical specifications. This assembly has all the advantages of the 23X.50 series mechanical gauge (ASME B40.100 & EN 837-1), and WIKA combines it with a superior designed Tri-Clamp[®] diaphragm seal.

Process Connection: 11/2" to 4" Tri-Clamp®

Ranges: Vacuum, compound and positive pressure up to 1,500 psi (limited by installation clamp rating)

Operating Temp: +25°F to 300°F

- Gauge Size: 21/2" or 4"- lower and back mount
- Case Fill: Glycerine (optional)
- Dial: White aluminum with black lettering
- Accuracy: 21/2": ±2/1/2% of span, 4": ±1.0% of span
- Case Material: 304 stainless steel electro-polished
 - case with vent plug and stainless steel electro-polished twist lock bayonet ring
- Window: Polycarbonate or polysulfone

Pointer: Black aluminum, adjustable

- Serial Number: Engraved in back of case
- System Fill: Glycerine, KN 7 non-vacuum application
- mineral oil, KN 92 vacuum and compound range applications

Gauge Features

All-welded design ±1% full scale, Grade 1A ≤ 20 Ra electro-polished Engraved material identification and serial number Manufacturer calibration report FDA-approved system fill fluids Meets 3A sanitary criteria

Available Options

- Material certification
- Gasket, clamps
- Auto claveable
- Polysulfone window

Notes:

1. Pressure rating and range dependent on mating clamp

2. Pressure range dependent on mating clamp, gauge size, and process connection size

Note: Clamps, gaskets, and ferrules must be ordered separately.

ASSEMBLED SEALS

Diaphragm Seals > Assembled Seals > M93X.D1

Type M93X.D1

Type M93X.D1 all-welded systems are a drop-in retrofit for existing gauges. This assembly eliminates all potential leak paths and has a tamper-resistant construction. The all-welded system is ideal for installations where tightly controlled fugitive emissions and safety are a concern. The M93X.D1 is wellsuited for applications in the chemical, petrochemical and process industries.

Standard Features

Design: This all-welded gauge assembly is constructed using WIKA gauge model number 23X.34 and diaphragm seal model number L990.34. The diaphragm is recessed within the all-welded seal body. The pressure gauge is back-welded to the seal upper housing to eliminate another potential leak path. The threaded seal fill port has been removed to ensure a tamper resistant design. Additional process wetted materials, process connections, system fill fluids and accessories are available to meet the rigorous demands of most applications.

Pressure Rating, Maximum: 1,500 psi and 5,000 psi Suitable Pressure Ranges: -30" Hg to 0 psi up to 5,000 psi Operating Temperature: 0 to 300°F (-18°C to 149°C) Ambient Temperature: -40°F to 150°F (-40°C to 66°C)

Gauge Features

Dial Size: 4½" process gauge Process Connection: ¼" NPT & ½" NPT male or female Process Wetted Materials: 316L stainless steel Case Material: Fiberglass reinforced thermoplastic Window: Acrylic Dial: Aluminum, white Pointer: Black aluminum Accuracy: ±0.5% of span System Fill Fluid: Silicone oil, DC200-10cst.

Available Options

- Cooling element
- Severe pressure pulsation protection
- Other sytem fill fluids
- Additional process connections
- Window materials

ASSEMBLED SEALS

Diaphragm Seals > Threaded Seals > L990.TA

Type L990.TA

When an application is not well-suited for a gauge alone, due to clogging or corrosive material, the WIKA L990.TA is ideal. This mini-seal is economical and features a onepiece, tamper-resistant construction with an upper and lower housing, eliminating the need for a gasket. The L990.TA is used in a variety of industries.

Diaphragm Seals > Threaded Seals > L990.TB

Type L990.TB

The WIKA Type L990.TB large mini-seal is used for low pressure applications to protect the installed instrument from clogging due to viscous, contaminated or solidified process medium. This seal also allows for an exotic material interface with the process to protect the instrument from a corrosive application.

Standard Features

Design: The diaphragm is welded together with the lower and upper housing, generating a leak-free construction. The diaphragm is located between the upper and lower housing. A flushing port can be added to the lower housing to clean the diaphragm cavity.

Pressure Rating, Maximum: 2,500 psi

Suitable Pressure Span, Minimum¹:

Gauge (Range²):

2½", ≥ 15 psi 4" or 4½", ≥ 15 psi

Pressure Transmitters (TRONIC)³: ≥ 15 psi

Operating Temperature: -130°F to 752°F (-90°C to 400°C)

Notes:

1. Typical values, dependant on pressure instrument and application

2. Includes compound ranges

3. Absolute pressure - check with factory

Diaphragm Seals > Threaded Seals > L990.10

Type L990.10

WIKA's Type L990.10 standard threaded seal configuration is constructed of an upper and lower housing with a welded diaphragm. The design of this multi-purpose seal enables it to be used on a variety of applications.

Standard Features

Design: The diaphragm is welded to the upper housing which allows the replacement of the lower housing without jeopardizing the integrity of the system fill fluid and installed instrument. The upper and lower housing are bolted together and sealed by use of an O-ring. Process wetted components can be manufactured with solid metallic and nonmetallic materials.

Pressure Rating, Maximum¹: up to 3,675 psi Suitable Pressure Span, Minimum²:

Gauge (Range³): 2½", ≥ 15 psi 4" or 4½", ≥ 15 psi

Pressure Transmitters (TRONIC)⁴: ≥ 15 psi Operating Temperature⁵: -130°F to 752°F (-90°C to 400°C)

Notes:

- 1. Pressure rating based on solid metallic components
- 2. Typical values, dependant on pressure instrument and application
- 3. Includes compound ranges
- 4. Absolute pressure check with factory
- 5. Can vary based on selection of materials, O-ring, assembly hardware and system fill fluid

Available Options

- Other materials
- Additional process connections
- Cooling element
- Capillary tubing

For full specifications and dimensional drawings, visit www.wika.com to download datasheet L990.10.

DIAPHRAGM SEALS

Diaphragm Seals > Threaded Seals > L990.TC

Type L990.TC

WIKA's Type L990.TC threaded seal is constructed of an upper and lower housing, two O-rings, and a diaphragm. Due to the clamped diaphragm design, if excessive wear occurs to the configuration, the diaphragm can be replaced as the pressure instrument remains intact.

Standard Features

Design: The diaphragm is clamped between the upper and lower housing. This design allows for the installation of metallic and nonmetallic diaphragms. The upper and lower housing and diaphragm are bolted together and sealed by use of two O-rings. Process wetted components can be manufactured with solid metallic and nonmetallic materials. **Pressure Rating, Maximum**¹: up to 2,500 psi

Suitable Pressure Span, Minimum²:

Gauge (Range³): 2½", ≥ 15 psi

4 or $4\frac{1}{2}$ ", ≥ 15 psi

Pressure Transmitters (TRONIC)4: ≥ 15 psi

Operating Temperature⁵: -130°F to 500°F (-90°C to 260°C)

Notes:

- 1. Pressure rating based on solid metallic components
- 2. Typical values, dependant on pressure instrument and application
- 3. Includes compound ranges
- 4. Absolute pressure check with factory
- 5. Can vary based on selection of materials, O-ring, assembly hardware and system fill fluid

Available Options

- Other materials
- Additional process connections

For full specifications and dimensional drawings, visit www.wika.com to download datasheet L990.TC.

Diaphragm Seals > Threaded Seals > L990.40

Type L990.40

WIKA's Type L990.40 large displacement volume threaded seal is constructed of an upper and lower housing with a welded diaphragm. This design allows for a variety of usable materials to be assembled to meet the requirements of specific applications. The large diameter diaphragm is excellent for use on low-pressure applications and with switches that contain a large displacement volume to activate.

Pressure Rating, Maximum¹: 1,500 psi Suitable Pressure Span, Minimum²: Gauge (Range³): $2^{1}/_{2}^{"}, \ge 15$ psi 4 or $4^{1}/_{2}^{"}, \ge 15$ psi Pressure Transmitters (TRONIC)⁴: ≥ 100 in H₂O Differential Transmitter (Span): $\ge 10^{"}$ H₂O Operating Temperature⁵: -130°F to 752°F (-90°C to 400°C)

Notes:

- 1. Pressure rating based on solid metallic components
- 2. Typical values, dependant on pressure instrument and application
- 3. Includes compound ranges
- 4. Absolute pressure check with factory
- 5. Can vary based on selection of materials, O-ring, assembly hardware and system fill fluid

Available Options

- Other materials
- Additional process connections
- Cooling element
- Capillary tubing

For full specifications and dimensional drawings, visit www.wika.com to download datasheet L990.40.

Diaphragm Seals > Threaded Seals > L990.34

Type L990.34

Standard Features

The Type L990.34 high-pressure seal is installed on pressure gauges or pressure transmitters. This seal protects the installed instrument from clogging due to viscous, contaminated or solidified process media. This all-welded design is used in controlled fugitive emissions applications.

Design: Diaphragm, lower and upper housing are welded together generating a leak-free construction. The diaphragm is located between the upper and lower

housing. A flushing port can be added to the lower

1. Typical values, dependant on pressure instrument and application 2. Can vary based on selection of materials, diaphragm diameter

housing to clean the diaphragm cavity.

Gauge, Range (with 2.1" diaphragm):

-130°F to 752°F (-90°C to 400°C)

For full specifications and dimensional drawings, visit www.wika.com to download datasheet L990.34.

Pressure Rating, Maximum²: 1,500 psi, 5,000 psi, 9,000 psi Suitable Pressure Span, Minimum¹: Gauge, Range (with 1.3" diaphragm):

> 2½", ≥ 30 psi 4½", ≥ 160 psi

 $2\frac{1}{2}, \ge 15 \text{ psi}$ $4 \& 4\frac{1}{2}, \ge 15 \text{ psi}$ Operating Temperature²:

Diaphragm Seals > Threaded Seals > L990.36

Type L990.36

WIKA Type L990.36 high-pressure button seal is used on pressure gauges or pressure transmitters. The flush diaphragm protects the installed instrument from clogging due to viscous and solidified process media. This flush design eliminates material hardening within an internal cavity, which may occur in a standard threaded seal.

Standard Features

Notes:

- 1. Typical values, dependant on pressure instrument and application
- 2. Can vary based on selection of materials, diaphragm diameter and system fill fluid

For full specifications and dimensional drawings, visit www.wika.com to download datasheet L990.36.

Diaphragm Seals > Flanged Seals > L990.12

Type L990.12

Type L990.12, WIKA's standard flanged seal configuration, has an upper and lower housing with a welded diaphragm. This construction allows for a variety of usable materials and process connection sizes to be assembled to meet the requirements of specific applications.

Standard Features

Design: The diaphragm is welded to the upper housing which allows the replacement of the lower housing without jeopardizing the integrity of the system fill fluid and installed instrument. The upper and lower housing are bolted together and sealed by use of an O-ring. Process wetted components can be manufactured with solid metallic, metallic lined and nonmetallic lined materials. Additional sealing faces and flange standards are available.

Pressure Rating, Maximum¹: 3,675 psi or maximum flange rating per ASME B16.5 **Suitable Pressure Span, Minimum²:**

Gauge (Range³): 2½", ≥ 15 psi

4 or 4½", ≥ 15 psi Pressure Transmitters (TRONIC)⁴: ≥ 15 psi

Operating Temperature⁵: -130°F to 752°F (-90°C to 400°C)

Notes:

- 1. Pressure rating based on solid metallic components
- 2. Typical values, dependant on pressure instrument and application
- 3. Includes compound ranges
- 4. Absolute pressure check with factory
- 5. Can vary based on selection of materials, O-ring, assembly hardware and system fill fluid

Available Options

- Other materials
- Additional process connections, DIN, JIS
- Cooling element
- Capillary tubing

For full specifications and dimensional drawings, visit www.wika.com to download datasheet L990.12.

Diaphragm Seals > Flanged Seals > L990.FA

Type L990.FA

The Type L990.FA flanged seal is constructed of an upper and lower housing, two O-rings and a diaphragm. The clamped diaphragm provides a method of replacing only the diaphragm when damage or excessive wear occurs.

Standard Features

Pressure Rating, Maximum: 2,500 psi or maximum flange rating per ASME B16.5 **Suitable Pressure Span, Minimum**¹:

Gauge (Range²):

2½", ≥ 15 psi

4 or $4\frac{1}{2}$ ", $\geq 15 \text{ psi}$

Pressure Transmitters (TRONIC)³: ≥ 15 psi

Operating Temperature⁴: -130°F to 500°F (-90°C to 260°C)

Notes:

DIAPHRAGM SEALS

Diaphragm Seals > Flanged Seals > L990.FC

Type L990.FC

Type L990.FC, 1" and $1\frac{1}{2}$ ", flanged seal configuration is comprised of a two-piece lower housing (flange and insert). The flange on this seal contains through holes for mounting with the end user's flange. The construction of this seal allows for numerous materials to be used for the process-wetted components.

Standard Features

Design: The insert on the flanged connection is bolted to the flange and upper housing and sealed with an O-ring. The flange and upper housing can be constructed of plated carbon steel or stainless steel. All process wetted components can be comprised of numerous materials, solid or lined.
 Process Rating, Maximum: 600 psi or maximum flange rating per ASME B16.5

Suitable Pressure Span, Minimum¹:

Gauge (Range²):

 $2\frac{1}{2}, \ge 15 \text{ psi}$ 4 or $4\frac{1}{2}, \ge 15 \text{ psi}$

Pressure Transmitters (TRONIC)³: ≥ 15 psi Operating Temperature⁴: -130°F to 752°F (-90°C to 400°C)

Notes:

DIAPHRAGM SEALS

- 1. Typical values, dependant on pressure instrument and application
- 2. Includes compound ranges
- 3. Absolute pressure check with factory
- 4. Can vary based on selection of materials, O-ring, assembly hardware and system fill fluid

Available Options

Diaphragm Seals > Flanged Seals > L990.FD

Type L990.FD

The L990.FD is a process industry diaphragm seal used in combination with pressure gauges. The design of this seal consists of an internal clamped diaphragm with a threaded process connection. The L990.FD diaphragm seal is intended for corrosive, contaminated, hot or viscous pressure media.

Standard Features

Pressure Rating, Maximum: 600 psi or maximum flange rating per ASME B16.5 **Suitable Pressure Span, Minimum¹:**

Gauge (Range²): 2½", ≥ 15 psi

4 or $4\frac{1}{2}$ ", $\geq 15 \text{ psi}$

Pressure Transmitters (TRONIC)³: ≥ 15 psi Operating Temperature⁴: -130°F to 500°F (-90°C to 260°C)

Notes:

DIAPHRAGM SEALS

Diaphragm Seals > Flanged Seals > L990.FB

Type L990.FB

WIKA Type L990.FB, WIKA's all-welded flanged seal configuration is comprised of an upper and lower housing welded together with an internal diaphragm providing a leakfree design. This all-welded design is ideal for applications where emissions to the environment are tightly monitored.

Standard Features

Pressure Rating, Maximum: 1,500 psi or maximum flange rating per ASME B.16.5

Suitable Pressure Span, Minimum¹:

Gauge (Range²):

2½", ≥ 15 psi

4 or 4½", ≥ 15 psi

Pressure Transmitters (TRONIC)³: ≥ 15 psi Operating Temperature⁴: -130°F to 752°F (-90°C to 400°C)

Notes:

- 1. Typical values, dependant on pressure instrument and application
- Includes compound ranges
- 3. Absolute pressure check with factory
- 4. Can vary based on selection of materials, O-ring, assembly hardware and system fill fluid

Available Options

- Other process connections, DIN, JIS
- Cooling element
- Capillary tubing

For full specifications and dimensional drawings, visit www.wika.com to download datasheet L990.FB.

Diaphragm Seals > Flanged Seals > L990.26

Type L990.26

Type L990.26 flanged diaphragm seal is a one-piece design. The diaphragm is recessed from the end user's gasket-sealing surface. A variety of process wetted materials are available, such as solid metallic, metal or plastic lined. This seal is commonly installed on transmitters and pressure gauges.

Standard Features

Design: This seal contains a recessed diaphragm to the gasketsealing surface. This seal is a one-piece design removing all requirements for internal gaskets and O-rings.

All exotic metal and Teflon[®] lined stainless steel are available; process wetted surfaces and 316 series stainless steel flange material is standard for WIKA. Additional sealing faces and flange standards are available.

Pressure Rating, Maximum: 725 psi maximum flange rating per ASME B16.5

Suitable Pressure Span, Minimum¹:

Gauge (Range²): 2½", ≥ 15 psi

4 or 4½", ≥ 15 psi

Pressure Transmitters (TRONIC)³: ≥ 15 psi **Operating Temperature**⁴: -130°F to 752°F (-90°C to 400°C)

Notes:

- 1. Typical values, dependant on pressure instrument, diaphragm
- diameter, process connection size and application
- 2. Includes compound ranges
- 3. Absolute pressure check with factory
- 4. Can vary based on selection of materials

Diaphragm Seals > Flanged Seals > L990.27

Type L990.27

Type L990.27 flanged, flush diaphragm seal is a one-piece design. The diaphragm is flush with the end user's gasket-sealing surface which removes all internal cavities, avoiding clogging and media build-up. A wide variety of process wetted materials are available, such as solid metallic, metal or plastic-lined, and coated. This seal is commonly installed on transmitters and pressure gauges.

Standard Features

Design: This seal contains a diaphragm flush on the gasket-sealing surface. This seal is a one-piece design removing all requirements for internal gaskets and O-rings. All exotic metal process wetted surfaces use the patented WIKA metal bonding process for diaphragm attachment that removes all welds from being exposed to the process media. 316 series stainless steel flange material is standard for WIKA. Additional sealing faces and flange standards are available.

Pressure Rating, Maximum: Maximum flange rating per ASME B16.5 Suitable Pressure, Minimum¹: Gauge Mechanical, Range: ≥ 15 psi Switch or Transmitter, Span: 200" H₂O

Differential Switch or Transmitter, Span: 10" H₂O differential

Operating Temperature²: -130°F to 752°F (-90°C to 400°C)

Notes:

 Typical values, dependant on pressure instrument, diaphragm diameter, process connection size and application

Diaphragm Seals > Flanged Seals > L990.41

Type L990.41

Type L990.41, WIKA's large displacement volume flange seal configuration, is comprised of an upper and lower housing with a welded diaphragm. This construction allows for a variety of materials to be used to meet specific requirements of applications. The large diameter diaphragm is excellent for use on low-pressure applications and with switches that contain a large displacement volume.

Standard Features

Pressure Rating, Maximum¹: 1,500 psi or maximum flange rating Suitable Pressure Span, Minimum²: Gauge Mechanical, Range: \geq 15 psi Switch or Transmitter, Span: 200" H₂0 Differential Switch or Transmitter, Span: 10" H₂O differential

Operating Temperature³**:** -130°F to 752°F (-90°C to 400°C)

Notes:

- 1. Pressure rating based on solid metallic components
- 2. Typical values, dependant on pressure instrument and application
- 3. Can vary based on selection of materials, O-ring, assembly hardware and system fill fluid

Available Options

- Other materials
- Other process connections, DIN, JIS
- Cooling element
- Capillary tubing

For full specifications and dimensional drawings, visit www.wika.com to download datasheet L990.41.

SANITARY SEALS

Diaphragm Seals > Sanitary Seals > L990.22

Type L990.22

WIKA's Type L990.22 Tri-Clamp® sanitary process connection is designed to mate with an equal sized fitting. This seal is designed to facilitate ease of assembly and disassembly from its mating fitting. This seal and mating fitting are held together via a clamp to minimize impurities entering the process during the removal and reinstallation of the seal. This seal meets the criteria set by "3A" standards. This seal is designed for applications in the pharmaceutical and food and beverage industries.

Standard Features

Design: This seal is designed to mate with a Tri-Clamp® sanitary process connection. The external flush diaphragm with gasket provides a hygienic process connection. The standard material of construction is 316 stainless steel. Electropolished process wetted surfaces are available as an option. Pressure Rating, Maximum (clamping device dependent, ref. MSHHS clamp): 1½" = 600 psi, 2" = 550 psi, 2½" = 450 psi, 3" = 350 psi, 4" = 250 psi Suitable Pressure, Minimum¹: Gauge Mechanical, Range: 1¹/₂" process connection: 21/2" -30" Hg to 60 psi up to -30" Hg to 600 psi 4 & 41/2" -30" Hg to 400 psi up to -30" Hg to 600 psi 2" process connection: 21/2" -30" Hg to 0 psi up to -30" Hg to 550 psi 4 & 41/2" -30" Hg to 100 psi up to -30" Hg to 550 psi 21/2", 3", & 4" process connection: -30" Hg to 0 psi up to -30" Hg to maximum pressure rating Gauge & Absolute Switch or Transmitter, Span²: 200" H₂O Differential Switch or Transmitter, Span²: 10" H_oO differential Operating Temperature³: -10°F to 572° F (-23°C to 300°C) For full specifications and dimensional drawings,

Diaphragm Seals > Plastic Seals > L990.31

Type L990.31

Type L990.31 is WIKA's version of a large threaded seal with a plastic body. The upper housing is made of PP. The diaphragm is clamped between the plastic upper and lower housing. This seal is made for applications where typical metallic components cannot withstand the process media (acids, chlorines, etc.) This seal is not designed for vacuum applications.

Standard Features

Design: The plastic lower is available in PP, PVC, and PVDF. The diaphragm is a CSM rubber (Hypalon®) with a PTFE (Teflon®) overlay. The diaphragm and upper and lower housing are bolted together.

Pressure Rating, Maximum: 160 psi Suitable Pressure, Minimum¹:

Gauge Mechanical, Range: ≥ 60 psi Switch or Transmitter, Span: 60 psi

Operating Temperature²:

32°F to 104°F (0°C to 40°C)

Notes:

1. Typical values, dependant on pressure instrument and application 2. Can vary based on selection of materials, O-ring, assembly hardware and system fill fluid

For full specifications and dimensional drawings. visit www.wika.com to download datasheet L990.31.

PLASTIC SEALS

INLINE SEALS™

Diaphragm Seals > INLINE Seals[™] > L981.10

Type L981.10

WIKA's Type L981.10 wafer INLINE SEAL[™] is for flow pressure measurement. This seal becomes an integral part of the process piping system resulting in no obstructions to the direction of the flow. Suited for rapidly flowing pressure media with low to medium viscosity. This seal is designed for applications in the petrochemical, chemical and most other flow

Standard Features

Design: This wafer seal is designed for bolting between two end user pipe flanges.

The outside diameter of the seal assists to obtain correct alignment during installation. The welded seal diaphragm contains no protrusions or interruptions to the process flow. 316L stainless steel is the most common material of construction, but additional materials are available.

Pressure Rating, Maximum: Maximum flange rating up to Class 2500 classification per ASME B16.5

Suitable Pressure Minimum¹:

Gauge Mechanical, Range: \geq 15 psi Switch or Transmitter, Span: 50" H₂O Differential Switch or Transmitter, Span: 10" H₂O differential

Operating Temperature²: -130°F to 752°F (-90°C to 400°C)

Notes:

1. Typical values, dependant on pressure instrument, diaphragm diameter, nominal pipe size and application

2. Can vary based on selection of materials

Available Options

- Other materials
- Cooling element
- Capillary tubing

For full specifications and dimensional drawings, visit www.wika.com to download datasheet L981.10..

INLINE SEALS™

Diaphragm Seals > INLINE Seals[™] > L981.27

Type L981.27

The Type L981.27 flanged INLINE SEAL[™] is designed for flow pressure measurements. The flanged INLINE SEAL[™] is installed between two end user flanges and becomes an integral part of the piping system. This seal replaces "T"s in the process piping system for installing pressure-measuring instruments. This seal is non-disruptive to the process flow and assists in obtaining a true pressure reading. Suited for rapidly flowing pressure media with low to medium viscosity, this seal is designed for a variety of applications.

Standard Features

Design: This seal contains two ASME flange process connections. The welded thin walled cylindrical diaphragm extends the entire length of the seal body. The diaphragm does not contain any protrusions or interruptions to the process flow. 316L stainless steel is the most common material of construction, but additional materials are available. Additional flange configurations are available.

Pressure Rating, Maximum: Maximum flange rating per ASME B16.5

Suitable Pressure, Minimum¹:

Gauge Mechanical, Range: ≥ 15 psi Switch or Transmitter, Span: 50" H₂O Differential Switch or Transmitter, Span: 10"H₂O differential **Operating Temperature** ^{2,3}: -130°F to 752°F (-90°C to 400°C)

Notes:

INLINE SEALS™

Diaphragm Seals > INLINE Seals[™] > L981.57

Type L981.22

Type L981.22, WIKA's Sanitary INLINE SEAL[™], is for flow pressure measurement applications. This seal becomes an integral part of the process piping system removing disturbing turbulence, cornering dead volume, and piping "T" or other obstacles that can occur in the direction of the flow. Suited for rapidly flowing pressure media with low to medium viscosity. This seal meets the criteria set by "3A" standards. Thisseal is designed for applications in the pharmaceutical and food & beverage industries.

Standard Features

Pressure Rating, Maximum:

1" and $1\frac{1}{2}$ " = 500 psi, 2" = 450 psi, $2\frac{1}{2}$ " = 400 psi, 3" = 350 psi, 4" = 200 psi

Suitable Pressure, Minimum¹:

Gauge Mechanical, Range: -30" Hg to 0 psi up to -30 Hg to maximum pressure rating

Gauge and Absolute Switch or Transmitter, Span: $50^{"}$ H₂O Differential Switch or Transmitter, Span: $10^{"}$ H₂O differential **Operating Temperature** ^{2,3}: -10°F to 572°F (-23°C to 300°C)

Notes:

- 1. Typical values, dependant on pressure instrument and application
- 2. Can vary based on selection of materials, O-ring, assembly hardware,
- process temperature and system fill fluid
- 3. For cleaning procedure, contact factory

SEAL ACCESSORIES

Diaphragm Seals > Seal Accessories > L910.27

Type L910.27

Type 910.27, WIKA's flushing ring is made to be sandwiched between the end user's flange and WIKA's flanged seal configurations without a lower housing. A flushing ring facilitates the purging of trapped gas pockets or settlement from the process cavity adjacent to the seal diaphragm. This flushing ring can also be used as ports for calibration. This accessory can be made of various solid materials.

Standard Features

- Pressure Rating, Maximum¹: Maximum flange rating per ASME B16.5
- Notes:

1. Maximum flange rating per ASME B16.5 for mating process flanges

Available Options

- Other materials
- Other process connections, DIN, JIS

For full specifications and dimensional drawings, visit www.wika.com to download datasheet L910.27.

SEAL ACCESSORIES

Diaphragm Seals > Seal Accessories > L910.ZA

Type L910.ZA

The Type L910.ZA saddle seal is made to measure process flow pressure. The saddle portion of this seal (lower housing) is welded to the external surface of a pipe with a hole opening to the process flow. This seal can be used with low to high viscous process media. This construction allows for a wide variety of usable materials to be assembled to meet the requirements of most flow applications.

Standard Features

Design: The diaphragm is welded to the upper housing of the seal that allows for the removal from the lower housing without jeopardizing the integrity of the system fill fluid and installed instrument. The upper and lower housing are bolted together and sealed by use of an O-ring. The radius on this lower housing is machined to fit the contour of the outside diameter of the process pipe.
 Pressure Rating, Maximum: 1,500 psi

Suitable Pressure Span, Minimum¹:

Gauge (Range²): $2\frac{1}{2}$ ", $\geq 15 \text{ psi}$

4 or 4½", ≥ 15 psi

Pressure Transmitters (TRONIC)³: ≥ 15 psi

Operating Temperature⁴: -130°F to 500°F (-90°C to 260°C)

Notes:

- 1. Typical values, dependant on pressure instrument and application
- 2. Includes compound ranges
- 3. Absolute pressure check with factory
- 4. Can vary based on selection of materials, O-ring, assembly hardware and system fill fluid

Available Options

- Insert available as Model L990.15
- 4" and larger
- Saddle or insert can be ordered separately

For full specifications and dimensional drawings, visit www.wika.com to download datasheet L910.ZA.

Diaphragm Seals > General Seal Information > Mounting Options

Mounting Options

Cooling Element

The cooling element is intended to protect the pressure instrument from high or low process temperature. Air flow across heat exchanging fins reduces or increases the temperature of the system fill fluid to protect the pressure measuring instrument.

The cooling element is recommended for process temperatures above 300°F. It is "direct mounted" between the pressure instrument and the diaphragm seal. Silicone fill is recommended. Effective for temperature reductions of 200°F, depending upon ambient conditions. The all stainless steel construction is back welded to the stainless steel upper housing or flange.

Capillary line

Stainless steel capillary with or without stainless steel armor provides a connection between the pressure instrument and the diaphragm seal. It protects the pressure instrument from high or low process temperatures and provides distant or remote reading.

The capillary should be selected as short as possible, since changes in ambient temperature conditions may considerably affect the accuracy and response time of the pressure instrument. Standard length is five feet; other lengths are available upon request.

Installation on mechanical gauges normally requires a gauge support and gauge adaptor or other surface mounting provisions.

Any level difference between pressure instrument and diaphragm seal will cause a pressure indication error. The level difference can be compensated for during calibration of the diaphragm seal assembly if the level difference is known.

Minor corrections can be made on site by means of an adjustable pointer or zero adjustment of the pressure instrument.

Gauge Support and Adaptor

The gauge support and adaptor provides wall mounting of the pressure instrument by clamping it to the gauge adaptor. Material: gauge support - aluminum or stainless steel, gauge adaptor - stainless steel.

Diaphragm Seal Assembly with Cooling Element. (Cooling element always welded to upper housing)

Assembly for Diaphragm Seals

Assembly of the diaphragm seal and capillary or cooling element to the pressure instrumentation includes filling liquid, sealing, securing the displacement system, and calibration at room temperature.

Extra charges apply to instrument mounting brackets, calibration other than room temperature, calibration certifications, additional modifications, transmitter assembly, and for "at level" differences between the instrument and the diaphragm seal. Consult factory for more information.

For the following assemblies:

	Diaphragm Seal Assembly For Use with Pressure Gauges and Pressure Switches

Mechanical Temperature > Bimetal Thermometers > Bimetal Operating Principle

Bimetal Operating Principle

The temperature is measured with a bimetal system inside the thermometer stem. The bimetal system consists of two metal strips bonded together that have different expansion coefficients. Therefore, one strip will expand faster than the other causing the bimetal strip to curl in proportion to its temperature. The bimetal system is helically wound and heat treated for long term stability. Temperature variations cause the bimetal strip to unwind or wind tighter, which in turn rotates the pointer.

Bimetal Thermometers General Specifications

Case: Sturdy, corrosion resistant series 304 stainless steel case and bezel. Designed and constructed to provide a hermetic seal (IP65, NEMA 4X) which prevents crystal fogging and damage caused by moisture to the working components. Install thermometer so the maximum temperature case is kept below 200°F at all times.

Dial: Anti-parallax heavy gauge aluminum with white matte finish to reduce glare. Dished form with Celsius on lower inner plane and Fahrenheit on raised outer plane offers accurate indication of both scales (if equipped with dual scales).

External Reset: (comes standard on all process grade bimetal thermometers) A slotted-hex adjustment head offers screwdriver or wrench use to field calibrate the thermometer. This feature allows maximum accuracy at a selected area of temperature range. O-ring gasket prevents leakage and maintains weather tight seal. Note - use well-agitated bath and accurate test thermometer when making any adjustment.

Standards: WIKA manufactures ASME B40.3 bimetal thermometers, which meet or exceed the standard issued by the American Society of Mechanical Engineers.

Window: Optically clear, strong glass, gasketed to maintain weather tight integrity. Acrylic and Lexan windows are available as an option but not recommended for case temperature exceeding 200F° maximum (150°F for plastic/acrylic window).

Pointer: Balanced, lightweight aluminum with matte black finish.

Stem: 304 SS welded at tip and case connector to prevent leakage. ¹/₄" diameter is standard, ³/₈" is available. Stem lengths to 72" are available as well as 316 SS stem and connector assemblies.

Immersion: For accurate temperature readings, immerse the stem a minimum of 2" in agitated liquid or 4" in moving air or gas.

Over Range: Temporary over or under range of 50% of scale up to 500°F or 260°C will not affect the instrument's accuracy.

Bimetal Element: An extremely responsive temperature sensing helix which has been carefully sized and tested, heat treated and aged to relieve inherent stresses and ensure continued accuracy.

Accuracy: Guaranteed to be accurate to within 1% of full scale (Grade A per ASME B40.3). Calibration is to standards traceable to the National Institute of Standards and Technology.

Hermetic Seal: Hermetically sealed per ASME B40.3. Guaranteed not to fog up. (IP65, NEMA 4X)

Dampening: Inert gel to minimize pointer oscillation.

7-Year Warranty: WIKA extends a 7-YEAR WARRANTY on standard types 30, 31, 50, 51, 32, & 52. Such units are guaranteed to be free from defects in material and workmanship under normal use and service. For all other models, WIKA extends a 1-year warranty. Complete details available upon request.

Filled Thermometer Policy: Silicone filling is available on selected types for ranges between -40°F and 500°F. WIKA does not recommend use of filled instruments for continual use at operating temperatures above of 400° F (204° C) or below -100° F(-70° C). Under no circumstances will an instrument warranty apply or will WIKA assume any liability for use above these temperatures. Per ASME B40.3, plain glass windows must not be used on filled thermometers due to expansion of fill fluid and potential lens breakage. Note: for stem lengths over 24"- consult factory.

Thermowells are recommended for pressure, corrosive, fluid or high velocity applications.

Mechanical Temperature > Bimetal Thermometers > TI.1005

Type TI.1005

Type TI.1005 is a bimetal dial thermometer requiring no power to deliver its quick, accurate readings. The 1" dial is easy to read. Stem length is 5". Thermometer includes pocket case which can be used to hold the stem.

Mechanical Temperature > Bimetal Thermometers > TI.ST

Type TI.ST

WIKA dual magnet surface mount thermometers are problem solvers. Type TI.ST is an inexpensive, easy-to-use, accurate surface mounting thermometer, which attaches to any ferrous metal surface, giving unlimited localized temperature indication. The specially-designed bimetal sensing element and housing provide quick readings with an accuracy of ±2% of full scale range. These 2" dial thermometers feature steel cases, glass windows, polished aluminum dials with very legible graduations, and are available in ranges listed below. WIKA dual magnet mount surface thermometers are the ideal choice for ovens, boilers, process lines, motors, generators, or anywhere a temporary or permanent surface temperature is to be measured.

Standard Features

DAMPENED MOVEMENT

Dampened Movement

Engineered solution providing benefits of case fill in a dry configuration. This silicone-free option provides dampening in tough environments at all available temperature ranges. Available in all process grade models.

T-85 Thermowell Conversion Kit

This conversion kit offers an easy, inexpensive way to install a WIKA bimetal thermometer in a glass industrial thermometer's thermowell. For more information, please consult factory. To order, specify part number **TA800-0T85**.

Union Lock Nut

The WIKA Union Lock Nut provides a simple and inexpensive means to mount WIKA bimetal thermometers with ½" NPT so that the dial is oriented for proper viewing. For more information, please consult factory. To order, specify part number **TA600-0111.**

Maximum or Minimum Indicating Pointer

This option allows operator to view what the highest or lowest temperature has been in the process. High vibration environments are not recommended.

Adjustable Union Connection

The WIKA Adjustable Union Connection allows for the installation of a Type 32 or 52 adjustable angle thermometer without rotating the case. Ideal for use in a confined space.

Left, Right or Top Connection All WIKA 3" and 5" Bottom Connected thermometers are available with the connection oriented to the left, right or top. Please see "How to Order" on next page for this option.

Not Shown

- Heavy duty 3/8" stems and 3/8" stems with 21/2" x 1/4" OD sensitive portion available
- Thermometers may be ordered with sharp tips for piercing media to be measured
- 316 stainless steel wetted parts are available
- 1/2" NPT duct flange

- Acrylic, Lexan, shatterproof and glass windows
 - Stainless steel tags are available options
- Silicone fill
- Certificates of Conformance, Origin and Calibration available
- Please see these options on Table 8 of "Ordering Bimetal Thermometers" on pages 391, 392
- Other options are available. Please consult factory

Mechanical Temperature > Digital Thermometers > TI.80/TI.82

Type TI.80/TI.82

WIKA's solar-powered digital thermometers are ideal for power utilities, petrochemical, and quality control applications, where exact readings are required. TI.80 and TI.82 offers easy-to-read digital temperature in single-degree increments in either Fahrenheit or Celsius scales. TI.80 has a center back mount, while the TI.82 has an adjustable angle, hermetically-sealed case.

DIGITAL THERMOMETERS

Standard Features

Case:	304 stainless steel
Stem:	304 stainless steel, lengths from 1" to 24"
Window:	Glass standard, acrylic available
Connection:	1/2" NPT, others available
Sensor System:	Ceramic thermistor requiring lighting of only 35 LUX to operate the
	3-volt solar cell. The circuitry offers a fast 15-second update time
	and accuracy to within 1% of scale. A patented safety circuit
	prevents false readings
Accuracy:	\pm 1% of full range span

For full specifications and dimensional drawings, visit www.wika.com to download datasheets TI.80, TI.82.

TWIN-TEMP THERMOMETERS

Mechanical Temperature > Twin-Temp Thermometers > TT.30/TT.32, TT.50/TT.52

Type TT.30/TT.32, TT.50/TT.52

The Twin-Temp thermometer combines the convenience, simplicity, and self-powered actuation of a bimetal thermometer and data acquisition capabilities of a thermocouple or RTD electrical output. With standards traceable to the NIST, the Twin-Temp offers simplified calibration for ISO 9001 compliance and other statistical process control requirements. It is ideal in applications requiring quick and easy readability at the point of process, while still affording a means of electronic data acquisition and digital panel remote read-out. The Twin-Temp puts two temperature sensors to work at one location.

Choose an electrical output configuration from either the left column only or right column only

Table 8 - Electrical Output & Connection Type Selections

Order from this column for direct thermocouple (female plug) or RTD (mini 3-pos terminal block) output only; will not accept transmitter or enclosure head options.

Electrical weatherproof housing connection is a 7/8-20 UNEF. Thermocouple = female plug PTD = 2 wire mini terminal block

RTD = 3-wire mini-terminal block

Code	Description
TJ	Thermocouple output, Type J (female plug)
ΤK	Thermocouple output, Type K (female plug)
TE	Thermocouple output, Type E (female plug)
TT	Thermocouple output, Type T (female plug)
RA	100 Ohm RTD output, 3-wire (terminal block)

★

Table 9 - Electrical Output Housing Options

(Match code to Table 8 output)

For non-transmitter units. Plug-in (RTD output wire-in) field connections only. (Match code to output selection in Table 8)

0	Code	Description
Γ	Х	None
	J	Straight barrel weather proof housing (7/8-20 UNEF) & plug
	Κ	Straight barrel weather proof housing (7/8-20 UNEF) & plug
	Е	Straight barrel weather proof housing (7/8-20 UNEF) & plug
	Т	Straight barrel weather proof housing (7/8-20 UNEF) & plug
	R	Straight barrel weather proof housing (7/8-20 UNEF)

Table 10 - Transmitter Output

For non-transmitter equiped units. Plug-in (RTD output wire-in) field connection only.

Code Description

X None (mandatory on all non-transmitter models, must use this code "X" for all TJ/TK/TE/TT/RA from Table 8)

Table 8 - Electrical Output & Connection Type Order from this column for unit with lead wires for

both thermocouple or RTD output; will accept enclosure head for transmitter or terminal block housing options.

Electrical enclosure connection is a $1\!\!/ 2^{"}$ NPT. Thermocouple or RTD is 6" flying lead wire.

Code Description

J1	Thermocouple output, Type J
K1	Thermocouple output, Type K
E1	Thermocouple output, Type E
T 4	The sum a second second sector of The set

T1Thermocouple output, Type TR1100 Ohm RTD output, 3-wire

Table 9 - Electrical Output Housing Options For transmitter-equipped units.

Code	Description			
Х	None			
А	*Std aluminum head enclosure			
Н	H *Exp. proof head			
* ½" NPT Twin-Temp x ¾" NPT field connection				

Table 10 - Transmitter OutputFor transmitter-equipped units.

Code Description

- None (mandatory on all non-transmitter models; must use this code "X" for all TJ/TE/TT/RA from Table 8
 ^{1.3} 4-20mA transmitter for all Thermocouple output
 ^{2.3} 4-20mA transmitter for all "R1" RTD output (from Table 8)
- B ³ Terminal block (for field wiring termination, when transmitter no used)

¹ only compatible with codes J1/K1/E1/T1 ² only compatible with code R1

³ must use code A or H from Table 9 for enclosure

138

Mechanical Temperature > Twin-Temp Thermometers > Twin-Temp Configurations

Twin-Temp Configurations

1. Weatherproof Housing and Plug

 7 /8-20 UNEF threaded barrel with bushing and compression nut provide environmental protection to thermocouple/RTD connection. (Order code J,K,E,T or R from Table 9)

2. ½" NPT electrical connection with lead wire Available in thermocouple or RTD. This allows site installation using other enclosures or piping systems. (Order code J1, K1, E1, T1, or R1 from Table 8)

3. Enclosure Head

A protective enclosure threads onto the optional 1/2" NPT electrical connection. The housing protects electrical connections from the environment. Houses a 4-20 mA transmitter or terminal block. Aluminum housing is standard. (Order code A from Table 9)

4. Terminal Block

Provides a connection point for the thermocouple or RTD. Mounts to thermocouple head with two screws. Requires lead-wire output connection (order code J1/K1/E1/T1/R1 from Table 8) and aluminum head enclosure. (Order code A from Table 9)

5. T-12 Thermocouple or T-24- RTD, 4-20 mA Transmitter Provides a clean 4-20 mA signal to control room, data acquisition equipment, panel readout, etc. Requires lead-wire output connection (order code J1/K1/E1/T1/

lead-wire output connection (order code J1/K1/E1/T1/ R1 from Table 8) and aluminum head enclosure (order code from Table 9).

Mechanical Temperature > Gas Actuated Thermometers > Gas Actuated Thermometers Operating and Installation

Gas Actuated Thermometers Operating and Installation

Gas actuated thermometers fall within "Class IV, gas-filled with absorbent" definition. They use a thermal system filled with gas and an absorbent (such as activated granular carbon) in the bulb. This technology allows for a significantly reduced bulb size. WIKA gas actuated thermometers offer extremely high accuracy, low ambient error, and extreme over-range capability. With the same small bulb diameter throughout the offered ranges, the WIKA thermometer can be installed in most existing piping and tank applications.

WIKA gas actuated thermometers provide the solution to mercury-free requirements in food processing, refrigeration, or other mercury-sensitive environments. A variety of case types, sizes and materials provides a custom made instrument for each application in ranges between -320° Fahrenheit and +1200° Fahrenheit or equivalent Celsius. Dual reading scales (F & C) are standard.

WIKA gas actuated dial thermometers are available as direct reading or remote reading with stainless steel bulbs and armored capillary. WIKA extends a one-year warranty against defects in material and workmanship on standard gas actuated dial thermometers.

Installation Guidelines: While WIKA gas actuated dial thermometers are highly accurate and rugged instruments, there are some guidelines that should be followed in their application and installation. Consideration must be given to the measured medium. Is it corrosive, abrasive, turbulent, or under pressure? Can the sensing bulb be placed to give an accurate indication of the temperature?

The sensing bulb should be placed in a non-turbulent area of piping or ducting and as close the center of the flow as possible. In tanks, it should be placed in an area of the tank that will provide a good average of the temperature of the fluid contained. The bulb should be protected from corrosive or abrasive media and excessively high pressures. The usual method of protection is the use of a thermowell.

When a remote reading thermometer is installed, consideration must be given to the location of the bulb, the dial indicator, and the routing of the capillary. The capillary must be located where it will not be damaged by workers or equipment used in future maintenance. Remember that the capillary CANNOT be cut to facilitate installation or relocation.

For Installation and Use of WIKA Filled System Dial Thermometers

General: Before installing a thermometer, consideration should be given to temperature, humidity, vibration, shock and other climatic and ambient conditions of the service application. Bulbs may be installed in thermowells or directly into the medium for temperature measurement. The filled system of the thermometer is a sealed unit and must remain sealed. The connecting tubing of remote units should be kept coiled to avoid sharp bends or kinks. Connecting tubing must not be cut. Thermometers can be rendered inaccurate during shipment despite care taken in packaging. To insure conformance to the accuracy to which the thermometer was manufactured, it should be checked before use.

Installation Procedure: The bulb should be located in the process at the point that will provide the temperature indication that is most representative of the process temperature. Circulation of the medium around the bulb is necessary for optimum response time and accuracy. For Direct Reading thermometers, use wrench flats when provided to install the thermometer. For Remote Reading thermometers – do not twist, kink, strain or cut the connecting tube. After the case has been mounted, uncoil and stretch out the connecting tubing, placing the bulb at its intended location. After installing the bulb, fasten the connecting tubing to a wall or other support to prevent damage. Position the connecting tubing to avoid extreme temperature. Since the connecting tubing length cannot be altered, any excess should be coiled on a 3" minimum radius and supported near the case.

Gas actuated thermometers have the following options and accessories: Flush Mounting Ring: Adapts the phenolic case for flush panel mounting. Windows: Optional acrylic or shatterproof glass available.

Mechanical Temperature > Gas Actuated Thermometers > Gas Actuated Thermometers Operating and Installation

Gas Actuated Thermal Systems

160

The WIKA Gas Actuated dial thermometer systems are available in several bulb and material configurations. The application should be the determining factor in deciding both the type and material of the thermal system. For use in corrosive or otherwise more demanding installations, WIKA offers a 316 stainless steel bulb and capillary. The stainless steel system is protected with stainless steel spring armor or an optional stainless steel interlocking armor. It should be noted that the unions on these systems DO NOT provide a pressure seal. For pressure seals, always use in conjunction with a thermowell.

For installations requiring a pressure seal between the process and the atmosphere, a thermowell should be used. The bendable extension with a sliding union allows for variable insertion depths to place properly the active portion of the sensing bulb in the process for maximum accuracy. Aluminum duct flanges are available for threading union fitted bulbs into duct work to provide temperature indication of ducted air or gases.

Thermal Systems

4UU

Code No.	Bulb Type	Bulb Material	Capillary Material	Capillary Protection
0	Just-Rite®	316 stainless steel	N/A	N/A
1	Plain	316 stainless steel	316 stainless steel	Stainless steel spring armor**
8	1/2" NPSM Sliding Union	316 stainless steel	316 stainless steel	Stainless steel spring armor**

**Stainless steel interlocking armor is available and must be used on systems longer than 40 feet.

Bulbs available on WIKA gas actuated dial thermometers have ³/₈" diameters to allow for installation in most existing piping and tanks. As the bulb is the temperature sensing element of the system, it must be placed where the most accurate temperature reading can be obtained. In piping, this is usually the center of the flow in an area of least turbulence. In tanks, this is an area that will represent a good average of the fluid temperature - usually close to the center of the tank. Available materials, lengths, and insertion depths for standard bulbs are listed in the accompanying chart.

WIKA gas actuated remote reading dial thermometers are manufactured in three wall-mounted case styles: the cast aluminum back flange case with a $4\frac{1}{2}$ " dial size, the phenolic/GRP turret case (also with a $4\frac{1}{2}$ " dial size) and the stainless steel back flange case available in 41/2" and 6" dial sizes. All may be specified with back or lower connected capillaries.

Standard Features

Accuracy: Over Range:	±1% of full range span 50% of span above top of range or 1300°F, which ever is lower	Capillary:	316 stainless steel with stainless steel spring armor, or 316 stainless steel with

Mechanical Temperature > Gas Actuated Thermometers > Temperature Switch Gauge Operating and Installation

Gas Actuated Thermometers Temperature Switch Gauge Operating and Installation

Operation: WIKA's TI.TSG60 Temperature Switch Gauge is a patented technology that offers the best accuracy and least ambient error in remote temperature technology. Our direct drive edge-welded Bourdon tube offers a linear 180° dial arc while maintaining positive operation of micro switches with a 1½% accuracy full scale with better than ½% repeatability. Most important is the extremely low ambient error due to the NiSpan Bourdon tube and carbon-filled molecular sieve gas actuated patented technology. The cam adjustable switches offer little resistance to the powerful direct drive system offering consistent switch action with low repeatability error.

Our dual system SCADA version offers dual independent outputs with a failsafe redundant system. Total independence offers accuracy of remote electronics plus the reliability of the local mechanical dial readout all within one unit. The SCADA system comes fully calibrated and requires no field calibration.

Switching: Up to four filled adjustable switches are available with standard ratings of 10 AMP @ 125/250 VAC, non-inductive; 5 AMP @ 120 VAC, inductive; ½ AMP @ 125 VDC, non-inductive; ¼ AMP @ 250 VDC, non-inductive. The differential is 3% of the range. Switches are fully adjustable within the full range of the instrument. Switches can be set within 2° C of each other.

Mounting/Installation: The TI.TSG60 Temperature Switch Gauge is ideal for general industrial installations. Switches can be adjusted from the front of the unit without having to shut down or remove the instrument from the process.

Adjustment of the Set Points: The TI.TSG60 has up to four fully adjustable set points adjustable from the front of the unit. The set point indicators are easily adjusted and then locked in place with the following procedure:

- 1. Unscrew and remove the front bezel and lens counter-clockwise, as it is shipped from the factory hand tightened.
- 2. Using a small straight screwdriver, loosen the Set Point indicator and, using two fingers, position the indicator to the desired Set Point, and re-tighten the Set Point indicator.
- 3. Replace the bezel and lens and, using a strap wrench, rotate the bezel and lens clockwise ³/₈" beyond hand tight to fully engage the waterproof gasket. Do not over tighten.

Max. Hand Setting: The TI.TSG60 is available with a maximum registering hand that will indicate the highest temperature the unit records by staying at that point. To re-set the max, hand turn the knob counter-clockwise until it rests against the pointer.

Mechanical Temperature > Gas Actuated Thermometers > TI.TSG60

Type TI.TSG60

WIKA's TI.TSG60 offers users an unprecedented combination of industrial strength performance with unmatched precision. This 6" gas actuated thermometer is accurate to within 1½% of scale and can tolerate up to 50% over range temperatures. Sealed inside the rugged stainless steel case are up to four single pole, double throw 10 amp switches for enabling a variety of switching actions. The thermal system is stainless steel, and filled with inert nitrogen making the TI.TSG60 ideal for steel and paper mills, refineries, petrochemical, and food and pharmaceutical plants.

For full specifications and dimensional drawings, visit www.wika.com to download datasheet TI.TSG60.

WIKA's 6" industrial glass thermometers are ideal for process piping, HVAC/R applications, diesel engines, compressors, and brine lines. This series of thermometers is manufactured in straight and back connected configurations, and come with a standard dual threaded brass socket with both 1/2" and 3/4" NPT connections.

Standard Features

haped gray GE Valox [®] ; wide angle construction tective glass cover retained within outer edges of case. Spring pressure ated by V-scale secures glass against case and prevents rattling. Cover te completes assembly.
e spirit fill liquid (non-mercury fill). V-shaped scale designed with extra ge black numbers. Crosslocked scale holding device prevents loosening or fting of scale and removes holes and screws that interfere with scale rkings or numerals.
sembly:
ass stem ensures fast response to temperature changes. e standard socket is made of brass and dual threaded for ½" and ¾" NPT. % of full scale range

Mechanical Temperature > Solar Industrial Glass Thermometer > TI.D01

Type TI.D01

WIKA's TI.D01 solar industrial thermometer offers fast, accurate, and easy-to-read temperature indications. This thermometer features a totally adjustable case to permit viewing at any angle, and its bulb and socket are completely interchangeable with standard industrial glass thermometers. The solar industrial thermometer is switchable between Fahrenheit and Celsius, and offers a sensing range of -50 to 300°F and -50 to 150°C, resolved in tenths of a degree, with accuracy to within \pm 1% of reading.

For full specifications and dimensional drawings, visit www.wika.com to download datasheets TI.D01.

Standard Features

Range:	-50/300°F (-50/150°C)
Accuracy:	$\pm 1\%$ of reading or 1°, whichever is greater
Resolution:	1/10° between –19.9/199.9°F (-28/93°C)
Lux Rating:	10 lux (one foot candle)
Update:	10 seconds
Ambient Ope	erating Temperature:
	-30/140°F (-35/60°C)
Humidity:	100% maximum
Ambient Tem	perature Error:
	None
Case:	High-impact ABS
Display:	7/16" LCD digits, wide ambient temperature range
Sensor:	Glass passivated thermistor

Type TI.701/TI.901

WIKA's TI.701 (7") and TI.901(9") industrial glass thermometers offer quick, easy-to-read temperature measurement for tough applications. Glass/mineral reinforced GE Valox® housings and spring mount-ed windows contribute to impact, shock and vibration resistance. WIKA industrial glass thermometers are the ideal choice for process piping, HVAC/R applications, diesel engines and compressors.

Standard Features

Case:	V-shaped case parts are molded of rugged GE Valox [®] 735 polyester, finished in textured black.	Adjustable Joint:	Matching GE Valox [®] joint completely encloses capillary for thermal system protection.
Stem:	Heavy glass window is spring- mounted to prevent rattles. To ensure sensitivity, bulb chambers	Tube and Capillary:	Blue spirit-fill liquid (non-mercury fill) standard; magnifying lens tube is silicone shock-mounted
	are precision ground aluminum, tapered for a close-tolerance metal- to-metal contact with matching		to increase service life. Guaran teed accurate to within $\pm 1\%$ of scale range.
	tapered socket. Graphite is used as a conductor between bulb chamber and glass tube.	Scale:	Permanently baked-on, bold black graduations are printed on white-coated aluminum. No
Locking Device:	Independent adjustable case lock- nut and angle adjusting screw provide 360° positioning of case and stem.	Accuracy:	mounting screws obscure scale. Scale adjusts through locking device at top of instrument. ±1% of full scale range

Mechanical Temperature > Thermowells > Threaded, Flanged, Sanitary, Socket, Weld, Weld-in

Type Threaded, Flanged, Sanitary, Socket, Weld, Weld-in

Thermowells for temperature instruments are recommended for all process systems where pressure, velocity or viscous, abrasive and corrosive materials are present individually or in combination. A properly selected thermowell protects the temperature instrument from possible damage resulting from these process variables. Furthermore, a thermowell permits removal of the temperature instrument for replacement, repair or testing without affecting the process media or the system.

Standard Features

Process Connections: Instrument Connection:	Threaded, flanged, sanitary, socket, weld, weld-in ½" NPSM standard (National Pipe Standard Mechanical; a straight pipe thread for mechanical joints)
Shank Configurations:	Reduced, straight, tapered
Bore Diameter:	260", .385"
Materials:	Brass, AISI 304, AISI 316
Surface Finish:	Brass: 60-100 Ra; AISI 304 & AISI 316: 60-100 Ra
	sanitary (AISI 304 & AISI 316): 16-20 Ra

Mechanical Temperature > Thermowells > Thermowell Terminology

Thermowell Terminology

Process Connection: External means to connect thermowell to process piping system. Wells can be threaded, bolted (to matching flange), clamped or welded in place.

Instrument Connection: Internal threads to connect temperature instrument to thermowell.

"U" Dimension: Length of well inserted into the piping system. Measured from the base of the process connection to the end tip of well.

"T" Dimension: Also called lagging extension. Extends length between the instrument and process connections to accommodate vessel or piping insulation. Standard length is 3" (2" for a well with a 2½" "U" dimension).

"S" Dimension: Instrument insertion length into well.

Bore Diameter: Dimension of internal bore to match the diameter of the instrument stem/bulb inserted into the well. The .260" and .385" bore sizes fit instrument stem/bulb diameters of 1/4" and 3/8" respectively. Bore length equals "S" dimension.

Root Diameter: Diameter of well shank below process connection. This dimension varies with process connection and/or shank design.

Tip Diameter: Diameter of well shank at the end tip of well. This dimension may vary with process connection and/or shank design.

Reduced Shank: Also called reduced tip. The shank O.D. is reduced over the last $2\frac{1}{2}$ " of the "U" dimension from the standard root diameter to a $\frac{1}{2}$ " O.D. The stepped shank is available with a .260" bore size only.

Straight Shank: Shank O.D. is the same from the root diameter to the tip diameter. The straight shank is generally used with a .385" bore size but a .260" bore size is available.

Tapered Shank: Shank O.D. is gradually reduced from the root diameter to the tip diameter. Available with a .260" or .385" bore size. The tapered shank is recommended for heavy duty applications characterized by high vibration, pressure, temperature and/or velocity.

Threaded Configuration

Notes:

 Normal "U" dimension on limited space well is 15%" for 3/4" NPT and 1" NPT process connection. (For 1/2" NPT process connection, "U" dimension becomes 1" to accommodate 1/2" NPSM female thread. Order as "010", i.e. 50TH2R010CC.

Mechanical Temperature > Thermowells > Flanged Configuration

Flanged Configuration

HOW TO ORDER

Specify flange size, rating and facing, thermowell "U" dim., bore dia. and material.

Raised face flange supplied as standard ANSI serrated. Specify 125 RMS smooth face if required at no extra charge.

Mechanical Temperature > Thermowells > Socket Weld Configuration

Socket Weld Configuration

Mechanical Temperature > Thermowells > Sanitary Configuration

Sanitary Configuration

Meets USDA and 3A Sanitary Standard 74-03.

Available with 1", $1\frac{1}{2}$ ", 2", and 3" solid end caps. Special designs available upon request.

Standard finish AISI 304 and AISI 316, 16-20 Ra.

Note: Minimum stem length is 4"

Accessories > Gauge Cocks > 910.10

Туре 910.10

WIKA gauge cocks provide an economical method for isolating the instrument from the process and for throttling line pressure. They also act as an adjustable flow orifice and are rated to 200 psi. WIKA's 910.10 gauge cocks are intended for use on light-duty air applications.

ACCESSORIES

Standard Features

Pressure Rating:	Brass: 200 psi	
Operating Temperature:	Media: max. 140°F (+93°C); min. 0°F (-18°C)	
Valve Body:	Brass	
Handle:	Brass, available with "T" or lever type handle	
Stem Seals:	None	
Standard Threaded Connection Size: 1/4" NPT or 1/2" NPT M & F		

For full specifications and dimensional drawings, visit www.wika.com to download datasheet 910.10.

Туре	910.10				
		Pressure	Gauge Co	ocks	
Material	Lever Type	Connection	Press. Rating	Max Temp Rating	Part Number

Brass	"T" handle	1/4" NPT-female X 1/4" NPT-male	200 psi	140°F	4339640
Brass	Lever handle	1/4" X 1/4" NPT-female	200 psi	140°F	4339658
Brass	Lever handle	1/2" X 1/2" NPT-female	200 psi	140°F	4339674
Brass	Lever handle	1/4" NPT-female X 1/4" NPT-male with union connection	200 psi	140°F	4339666

NOTE: In applications where process media leakage may result in possible personal injury or property damage, gauge cocks should not be specified as they contain no packing gland and leakage may result. For tight shut-off and prevention of leakage, use of a WIKA Needle Valve is required.

Accessories > Needle Valves > 910.11

Туре 910.11

Type 910.11 needle valves can be used to isolate a pressure instrument from the application. For general applications, the hard seat version is the industry standard. Soft seat versions are ideal for gaseous media where a bubble tight seal is required. Both in-line and angle versions are available.

Standard Features - Carbon Steel Model

Pressure Rating:	hard seat -10,000 psi @ 200°F max.
	soft seat - 6,000 psi @ 200°F max.

ACCESSORIES

910.12.300

ACCESSORIES

Accessories > Overpressure Protector > 910.13

Туре 910.13

Type 910.13 overpressure protectors protect pressure instruments from damaging spikes or surges. At a "pre-set" pressure, the overpressure protector "shuts-off" the pressure to the instrument thus preventing damage to the pressure sensing element and protecting the calibration. The set-point is externally adjustable. Type 910.13 overpressure protectors also feature an adjustable piston valve which is designed to dampen system pulsation.

Description

The overpressure protector consists of a spring loaded piston valve. Under normal pressure conditions the spring holds the valve open. When the system pressure exceeds the set pressure, the force exerted by the spring is overcome and the valve closes. The valve will remain closed until the system pressure drops approximately 25% below the closing pressure, where upon the force of the spring will open the valve.

Overpressure protectors must not be used as process control devices.

Standard Features

Pressure connection:

1/2" NPT male inlet, female outlet Body: 316Ti stainless steel Piston Valve: 316Ti stainless steel

O-Ring: FPM (Viton)

Operating Temperature:

176 °F (80 °C maximum) Flow Direction:

Male thread to female thread

For full specifications and dimensional drawings, visit www.wika.com to download datasheet 910.13.

Special Features

- 7 different setting ranges selectable
- Minimum pressure to 6 psi (0.4 bar)
- Maximum pressure to 8,700 psi (600 bar)
- Overpressure safe up to 14,500 psi (1,000 bar)
- Vacuum safe

Special Options

- Other thread connections: 1/4" NPT, G1/4B and G1/2B
- Other materials: Brass, Monel[®] 400
- Material Certificate (3.1 acc. to EN 10 204)
- Nace Certificate (2.2 acc. to EN 10 204)
- Oxygen service (oil and grease free)
- Mounted on pressure gauge with customer specifications, includes SS tag (note 2)
- Overpressure protector set to customer specifications, includes SS tag (note 2)

Note 2: Items come pre-set from factory. Customer must specify set or closing pressure. Choose factory set part numbers for pressure gauge mounting and/or factory preset. Accessories > Test Port Plugs > 910.14.100

Туре 910.14.100

WIKA's 910.14.100 pressure and temperature test port plugs allow media access ideally for hydronic pressure and temperature measurement, without disturbing the process. The pressure and temperature units are equipped with a self-sealing pierceable rubber diaphragm and are rated at 1000 psi and 200°F (350°F available).

Standard Features

Pressure Connection:	1/4" NPT or 1/2" NPT male
Material:	Brass body; neoprene or nordel diaphragm core
Self-Sealing Diaphragm Material	Neoprene or nordel
Pressure Rating:	1000 psi
Temperature Rating:	Neoprene 32-200°F max.; Nordel 32-350°F max.

Accessories > Mini-Siphon > 910.24

Type 910.24

The WIKA mini-siphon is designed specifically to replace the old pigtail and coil siphon. The mini-siphon has a thermal barrier which protects the pressure gauge from harmful steam, hot vapors and liquids, and contains a unique inner chamber that reduces pressure surges and "water hammer". The mini-siphon also eliminates gauge whip and vibration that is typically found on traditional siphons by mounting the gauge closer to the process.

Standard Features

Materials:

Body: 316Ti stainless steel (1.4571)

- Internal Chamber: 316Ti stainless steel (1.4571) Mounting Position: Vertical or horizontal
- Connection: 1/2" NPT-male to 1/2" NPT-female
- Flow: Male to female connection
- Inlet Orifice: 0.1575 inches (4mm)

Maximum Media Pressure: 6,164 psi (425 bar) Maximum Media Temperature: 840°F (450°C)

Available Options

- Other thread connections: 1/4" NPT, G1/4B н. and G1/2B
- Other materials: Monel 400, Hastelloy, Titanium, and Duplex
- Material Certificate (3.1 acc. to EN 10 204)
- NACE Certificate (2.2 acc. to EN 10 204)
- Oxygen service (oil and grease free)

For full specifications and dimensional drawings. visit www.wika.com to download datasheet 910.24.

Accessories > Siphons > 910.15.100, 910.15.200

Type 910.15.100, 910.15.200

Siphons should be used to protect pressure instruments in live steam service or other hot vapor applications. The vapor condenses inside the coil of the siphon which prevents the high temperature vapors from reaching the sensing element of the pressure instrument. Additionally siphons assists in lowering process media temperatures.

Standard Features

Forms:Pigtail siphon, Coil siphonMaterials:Brass, Steel A120 schedule 40, Steel A106B
schedule 80 & 160, 316 stainless steel
schedules 40, 80 & 160, Chrome Moly steel

(A335 P22) XX Heavy Media Temperature Reduction:

Approximately 75°F for each 1 foot lineal section of pipe. Actual reduction dependent on process/application variables.

Available Options

- Alternate threads
- Special alloy material
- Cleaned for oxygen service
- Material certificate

Note: When first installed, siphon should be filled with water or any other suitable separating liquid.

For full specifications and dimensional drawings, visit www.wika.com to download datasheet 910.15.

Accessories > Pressure Switches/Alarm Contacts > CP3000/CP4000

CP3000/CP4000

WIKA indicating pressure switches combine local pressure indication with alarm and control capabilities into a single economical, reliable and compact system. Superior to conventional gauge and switch connections, WIKA indicating pressure switches are extremely reliable, have low hysteresis, resist corrosion, and have easy set point adjustments. WIKA pressure switches are ideally suited for alarm and control functions on hydraulic, pneumatic and general industrial machinery and equipment. Additionally, pressure switches are used in process industry installations, including chemical and petrochemical plants, oil refineries, electric power plants, pulp and paper mills, and water and waste water treatment plants.

Standard Features

Area of Installation: Indicating Pressure Range: 0-60 to 0-20,000 psi Set Point Pressure Range: **Contact Rating AC: Switching Hysteresis:**

ACCESSORIES

Accessories > Pressure Switches/Alarm Contacts > CP3000/CP4000

CP3000/CP4000

CP 3000 - Magnetically-Assisted Contacts

CP 3000 magnetically assisted contacts feature one or two magnetically-assisted mechanical contacts. The contact assembly includes a built-in Triac switching amplifier which minimizes contact wear and allows load switching to 65VA. In this design, a movable contact couples to the gauge pointer through a special adaptor. As the contact approaches the set pointer, the magnetic force of a small permanent magnet attached to the set pointer assists in closing and holding the contacts in place. This avoids arching and reduces contact wear. The switching amplifier further reduces potential wear by its ability to switch large load currents with small control current. The technical specifications are listed in Table 1 on the next page. These switches are designed for use on alternating current (for DC consult WIKA).

CP 4000 - Inductive Proximity Sensors

CP 4000 inductive proximity sensors feature one or two inductive non-contact proximity sensors in place of mechanical contacts and provide a high degree of reliability and operating safety. The system consists of a sensing head, containing two axial coils with air gap, a metallic control flag and a switching amplifier. The sensing head is carried by the set pointer, while the control flag is coupled to the gauge pointer by way of a special adaptor. Movement of the control flag in and out of the air gap causes an impedance change in the transistor oscillator circuit formed by the two coils which in turn triggers the switching amplifier. When the flag is inside the slot, circuit impedance is high and the contact relay is de-energized. Conversely, when the flag is outside the slot, the relay is energized. The technical specifications are listed in Table 1 on the next page.

Control Units for CP 4000

The switching amplifier and control relay are housed in a separate control unit. Depending on the type of control unit used, inductive proximity sensor systems can be furnished in the following versions: standard for nonhazardous locations; intrinsically safe for hazardous locations; intrinsically safe with fail-safe circuitry. Control units are FM approved for use in Division I, Classes I and II, Groups A through G hazardous locations. The control units must be located outside the hazardous area. (See Table on next page).

Fail Safe Circuitry

Type SN inductive proximity sensor together with control unit Type 904.17 is self monitoring, and its function is superimposed on the regular control function. Should any fault occur in the sensing head (such as short or open circuit, power failure or component failure), the control wiring or the control unit, the output relay is automatically de-energized.

² Type 904 control units are combination power supply, switching modules for panel or relay rack mount. 904.15 & 904.25 units are 1.57" (40mm) wide, 2.76" (70mm) high and 4.33" (110mm) deep with mounting holes on 1.18" (30mm) horizontal & 2.36" (60mm) vertical centers. The wider 904.16/.17 and 904.26 units are 2.35" (60mm) wide with 1.96" (50mm) horizontal mounting centers. Minimum mounting screw clearance is .19" (4.8mm).

³ Requires 2 units, one per contact.

Accessories > Socket Restrictor/Drag Pointer/Alarm Contacts

Socket Restrictor/Drag Pointer/Alarm Contacts

WIKA offers a full line of gauge accessories, including socket restrictors, drag pointers, and alarm contacts. Each of these products is an enhancement to the extensive WIKA product line.

Socket Restrictor

Available in brass, stainless steel, or Monel[®], the socket restrictor reduces the size of the internal bore. The restrictor dampens the effects of pulsation which in turn helps prevent internal damage to the Bourdon tube and movement and extends the life of the gauge.

Drag Pointer (High Point Indicator)

The red drag pointer follows the regular pointer on increasing pressure, and remains at the highest point until it is reset by a knob on the front of the window. Drag pointers are best suited for dry gauges.

Alarm Contacts

Many WIKA 2" (830.1E), $2\frac{1}{2}$ ", 4", $4\frac{1}{2}$ " & 6" pressure gauges can be supplied with alarm contacts. Both inductive and magnetically-assisted contacts are available for dry and liquid-filled gauges. In addition, alarm contact assemblies are available for intrinsically-safe environments. Available on models 212.20, 23X.30, 23X.50, 2XX.34, 4XX.XX, and 7XX.XX.

Minimum pressure range of 160 psi is required. Due to its high viscosity, the standard glycerine filling is replaced with a glycerine/water filling.

Accuracy is reduced to $\pm 5.0\%$ of full span. ² Use for pressures equal to or below 30 psi full span.

³ For 2½" drag pointers: For pressure ranges ≤100 psi ; Additional accuracy reduction: DRY: ±3%FS, LF:±5%

For pressure ranges > 100 psi; Additional accuracy reduction: DRY: ± 1.5%FS, LF:±3% Special tooling required for Part Numbers 738344, 1193864, 738352, 1326651, 738395 & 1416570

GENERAL INFORMATION

How to convert from °Celsius to °Fahrenheit, or °Fahrenheit to °Celsius

Locate the known temperature (either Fahrenheit or Celsius) in the center shaded column.

Read left to convert from Celsius to Fahrenheit,

or right to convert from Fahrenheit to Celsius.

For over 60 years, WIKA Instrument Corporation has continuously advanced pressure gauge, transmitter and temperature measurement instrumentation. As the global leader in lean manufacturing, WIKA offers a broad selection of stock and custom instrumentation solutions, which are often available for distribution within days. Producing over 40 million gauges, diaphragm seals, transmitters and thermometers worldwide annually, WIKA's extensive product line provides measurement solutions for any application. The WIKA sales team, along with its customer service and technical staff members, are ready to share their extensive product and industry knowledge to make your business experience with WIKA productive and progressive.

WIKA Instrument Corporation Pressure and Temperature Measurement 1000 Wiegand Boulevard

Lawrenceville, GA 30043 Toll Free (888) WIKA-USA (888-945-2872) Tel (770) 513-8200 • Fax (770) 338-5118 info@wika.com • www.wika.com

C009 - 10,000 06/10 © WIKA Instrument Corporation All rights reserved WIKA provides distinctive service and support to our channel partners and customers:

- Award winning U.S.-based manufacturing, sales and ordering customer service and technical support
- Certified technical specialists who conduct Best Practice
 Instrument Reviews with performance improvement reports
- An in-house engineering team for product customization and innovation
- Proven capabilities to connect with customer business processes for ordering and inventory management
- Web-based customer service features, including RFQs, literature request and competitor product cross reference
